Map 1
Chinantec Region of Mexico

Preface

Comaltepec Chinantec is the language spoken in the town of Santiago Comaltepec, which is located approximately 65 miles north of the city of Oaxaca, in the ex-District of Ixtlán, in the Sierra Juárez mountains of Southern Mexico. Approximately 1500 Chinantec people speak this language, living either in Santiago Comaltepec itself or in one of the ranch areas pertaining to it. Comaltepec Chinantec is one of the dozen or so mutually unintelligible Chinantec languages which make up the Chinantec language family.

These data were collected from 1970 to the present from several different speakers of Comaltepec Chinantec, both by oral and written texts and personal interaction.

This study is a basic sketch of Comaltepec Chinantec syntax. The phonology is sketched only very briefly, but see Anderson, Martínez, & Pace (forthcoming) for a detailed presentation of Comaltepec tone. More study needs to be done to complete a more comprehensive study of syntax. This study was drafted during the months of February through April, 1988, at a workshop designed for that purpose in Catalina, Arizona, near Tucson, under the direction of Dr. William R. Merrifield. The information upon which the study is based was gathered both in Comaltepec as well as with Chinantec speakers outside of the immediate area. I am indebted to my two colleagues, Wanda Jane Pace and Diane Poole, who have spent considerable time with me in the language area and have also involved themselves in the study of this language. I am also greatly indebted to a number of speakers of this language who have given me the privilege of being their friend. Rudy Troike read a draft of the manuscript and made numerous helpful comments which have improved it greatly.

1

Comaltepec Chinantec Phonology

Comaltepec Chinantec phonology has been described more completely elsewhere (Anderson, Martínez, & Pace forthcoming), with special reference to tone. The phonological inventory, therefore, is presented here in brief outline only, focusing upon the elements found in a stressed syllable.

1.1. Vowels. There are eight oral vowels /i e u o ĩ ä a/. *ti:L* ‘thin’, *te:L* ‘white’, *tu?L* ‘crooked’, *to:L* ‘banana’, *tiLM* ‘expert’, *té:Lr* ‘s/he carries’, *tá:LH* ‘father’, *taL* ‘cane’.

Of these eight, two are marginal to the system. /ä/ is in near complementary distribution with the sequence /ia/, only contrasting after laryngeals /h ?/. *hääLM* ‘spider’, *hiáLM* ‘cliff’, *?ääLM* ‘very’, *?iaLM* ‘comal’, *?iá:nL* ‘it sprouts’. /ë/ is least common of the vowels and is the only one which never occurs with nasalization.

If we, thus, consider the primary system to consist of just six vowels, it falls into Crothers’ (1978) very common Type 6.1—six vowels, five of them peripheral vowels /i e u o a/, one of them interior /i/.

Any vowel may be short. *liH* ‘flower’, *he?LM* ‘frog’, *húH* ‘mosquito’, *to?L* ‘carbon’, *si?L* ‘moon’, *téLr* ‘s/he calls’, *kuäLH* ‘horse’, *taLH* ‘work’.

Any vowel may be long. *ni:M* ‘my face’, *?le:L* ‘dust’, *hú:H* ‘word’, *to:L* ‘banana’, *sí:L* ‘nest’, *bë:LH* ‘roundish’, *kuá:nLr* ‘is tall’, *gá:nL* ‘three (a)’.

Any vowel, whether long or short, may be nasalized, with the possible exception of long /ë: ä:/, which have not been found nasalized except following a nasal consonantal onset or followed by postnuclear /n/. *hi?L* ‘orange’, *hi:L* ‘year’, *hé?Lr* ‘leave something’, *?é:L* ‘tomb’, *túLM* ‘guitar’, *tú:LH* ‘left (hand)’, *tó?LMr* ‘mend’, *kɔ:L* ‘one’, *hiLMr* ‘burn’, *hi:H* ‘weasel’, *hë?Lr* ‘give’, *?ääLM* ‘bridge’, *táLM* ‘bird’, *?a:M* ‘stay’.

The vowel nucleus of any Comaltepec syllable having a nasal onset is invariably nasalized. Since such nasalization is noncontrastive, it is unmarked in this study apart from the specific nasal consonant. *?mo:^L* [*?mɔ:^L*] ‘ice’, *?ŋa^{LH}* [*?ŋa^{LH}*] ‘forest’.

1.2. Consonants. Sixteen consonants may occur syllable-initially in Comaltepec Chinantec: voiceless stops /p t k/; voiced stops /b d g/; nasals /m n ŋ/; fricative /s/; affricates /c z/; voiced oral continuant /l/; vibrant /r/, and the laryngeals /ʔ h/. *pí^{PH}* ‘little’, *ta^L* ‘carrizo’, *ka^{?LM}* ‘beside’, *bá^{PH}* ‘huge’, *dó^M* ‘there’, *ga^L* ‘ugly’, *mī^{LH}* ‘thick’, *na^L* ‘there’, *ŋó:^{LH}* ‘son-in-law’, *sā^L* ‘exist’, *cí^M* (term of endearment), *zā^L* ‘people’, *la^L* ‘here’, *ro:^L* ‘tobacco’, *?a^{LH}* ‘contains’, *ha^L* (negative).

Consonant clusters. The laryngeals /ʔ h/ may precede /g/ or any of the voiced continuants /m n ŋ l/ to form complex syllable onsets. *?go:^L* ‘elegant’, *hgo^{?L}* ‘rotten’, *?mo:^L* ‘ice’, *hmo:^L* ‘woven mat’, *?nó:^{Lr}* ‘s/he gets’, *hnó:^{LMr}* ‘s/he slaps’, *?ŋa^{LH}* ‘forest’, *hŋé:^M* ‘I plant’, *?lo:^L* ‘river rocks’, *hlo^{?H}* ‘gorgeous’.

Three consonants /b n r/ may occur syllable-finally. Of these, /b r/ always constitute a separate morpheme in this position; only /-n/ occurs as a final consonant in morphemically simple forms, as in *bé:^{nL}* ‘bud, shoot’. For this reason, syllable-final /b r/ are written in this study as posttonic material, following the stressed syllable. *ti:^{Mb}* ‘silently (AFF)’, *nú^{Mr}* ‘s/he will listen’.

A syllable may be open or checked by glottal /ʔ/. *ta^{LH}* ‘work’, *ta^{?LM}* ‘honey’, *nó:^M* ‘Yolox’, *mó:^{?M}* ‘you see’.

1.3. Palatalization and labialization. Palatalization or labialization may occur between the consonantal onset of a syllable and the vocalic peak which follows it.

Palatalization (written as /i/) may occur following any consonantal onset other than a bilabial or /r/. *tiú^{LM}* ‘rifle’, *kiá^{?M}* ‘of (him/her)’, *gia^{?LM}* ‘tapir’, *?niu^L* ‘you (sg)’, *ŋiú^M* ‘nine’, *siú:^{LH}* ‘deer’, *ziú:^M* ‘jug’, *liú^{?L}* ‘you lick’, *?ia^L* ‘boils’, *hiá^{LM}* ‘cliff’.

When a velar consonant /k g ŋ/ is followed by a front vowel /i e/, there is invariably a palatal glide intervening between them. Such palatalization is treated as automatic and not written in this study. *ke:^L* [k^ye:^L] ‘crow’, *ge^{?M}* [g^ye?^M] ‘it arrives’, *ŋi^H* [ŋ^yi^H] ‘metal’.

Labialization (written as /u/) occurs only following velar stops /k g/ and laryngeals /ʔ h/. *kuo^{?L}* ‘bald’, *guo^{?L}* ‘knothole’, *?ua^{LH}* ‘soft’, *hui^{?L}* ‘fishscale’.

The sequence /iʉ/ is attested with all consonantal onsets with which prenuclear /i/ is known to occur. In this sequence, unless followed by the postnuclear nasal, /u/ is rounded to [ü]. *giú^M* [giú^M] ‘good (i)’, *giún^M* [giún^M] ‘good (a)’.

1.4. Stress. There are two kinds of syllable stress, ballistic and controlled (Merrifield 1963). Ballistic stress is a combination of pitch and stress. It tends to raise high tones and lower low tones. The ballistic syllable is marked by an acute accent /´/ over its nuclear vowel. A controlled syllable is unmarked. *lo:L* ‘skin’, *ló:LH* ‘lime’.

1.5. Tone. Comaltepec Chinantec has three level tones—low tone /L/, mid tone /M/, and high tone /H/. There are also four glides /LM LH HM HL/ as demonstrated in the following examples: *ta^L* ‘cane’, *té^M* ‘sticky’, *iá^H* ‘weed-chopper’, *há^{LM}* ‘spider’, *ta^{LH}* ‘work’, *te^Lgua^{HM}* ‘earring’, and *cu^Lte^{HL}* ‘silver’.

The two downglides /HM/ and /HL/ only occur in two-syllable words, or following a tone which causes tone sandhi, e.g. *lo^Lgui^{HM}* ‘hat’, *mo^Ltu^{HL}* ‘egg’.

Tone sandhi in Comaltepec Chinantec is typically perseverative. A more detailed development of this tone sandhi occurs in the tone study by Anderson, Martínez, & Pace (forthcoming). Basically, in predictable environments, a low tone /L/ becomes high-low /HL/, low-high /LH/ becomes high-mid /HM/, and mid /M/ tone becomes high /H/ in a ballistic syllable or high-mid /HM/ in a long controlled syllable. *so:^M* ‘ascent’ + *rë:^L* ‘smooth’ → *so:^M rë:^{HL}* ‘smooth ascent’, *mi^M* ‘ask for (inanimate object)’ + *hnä^{LH}* ‘I’ → *mi^M hnä^{HM}* ‘I ask for (inanimate object)’, *mi^Mi* ‘I ask for (inanimate object)’ + *kiá^{?Mr}* ‘his/hers’ → *mi^Mi kiá^{?Hr}* ‘I ask for his/her (inanimate object)’, *mi^Mi* ‘I ask for (inanimate object)’ + *ziu:^M* ‘jar’ → *mi^Mi ziu:^{HM}* ‘I ask for a/the jar’.

2

The Comaltepec Chinantec Verb

2.1. Active vs. stative verb stems. In its minimal form, a verb consists of a verb stem which is either active or stative. An active verb stem is internally inflected for tense-aspect and may occur with any of several tense-aspect prefixes, as in (1); a stative verb stem is not so inflected and may occur with only a restricted set of tense-aspect prefixes, as in (2), specifically excluding past-tense prefixes. Both active and stative verb stems are inflected for person-of-subject.

- (1) *ka^L-hmé^Me*, PST-do[^]C1s, I did it.
ni^L-hmé^LHe, IMPF-do[^]I1s, I will do it.
- (2) *ze^ʔLHe*, sick[^]S1s, I am sick.
ni^L-ze^ʔLHe, IMPF-sick[^]S1s, I was sick.

Stative verbs are discussed in more detail below, but the discussion which follows immediately focuses upon the inflectional patterns of active verb forms.

2.2. Active verb stem inflection. The internal inflection of Comaltepec active verb stems is complex to the point of frustrating any attempt to isolate individual morphemes which mark categories of aspect or person-of-subject. A combination of tone, ballistic stress, and segmental changes define these categories in a three-by-four, twelve-place matrix with three aspectual parameters—Progressive (P), Intensive (I), and Completive (C)—and four parameters of person—First-Person Singular (1s), First-Person Plural (1p), Second Person (2), and Third Person (3).

The paradigm of the verb 'read' illustrates such a matrix in (3). Tense prefixes and enclitic pronouns are not included in the matrix, although they are normally present in speech and help distinguish homophonous forms like the progressive first-singular, first-plural, and second-person forms of (3).

(3)	read	1s	1p	2	3
	P	<i>ʔi^L</i>	<i>ʔi^L</i>	<i>ʔi^L</i>	<i>ʔi^{LM}</i>
	I	<i>ʔi^M</i>	<i>ʔi^H</i>	<i>ʔi^H</i>	<i>ʔi^M</i>
	C	<i>ʔi^L</i>	<i>ʔi^H</i>	<i>ʔi^L</i>	<i>ʔi^L</i>

Comaltepec verb stems participate in a large number of such paradigms which, like (3), may differ phonologically from one another by tone, length, palatalization, vowel, nasalization, stress, or glottal closure, in a bewildering variety of patterns. A particular verb root may participate in several such paradigms to mark differences in gender or transitivity. Compare, for example, the transitive inanimate (TI) forms of the verb meaning 'hit' in (4) with the corresponding transitive animate (TA) forms in (5).¹

(4)	hit (TI)	1s	1p	2	3
	P	<i>bá^L</i>	<i>ba^L</i>	<i>bá^L</i>	<i>bá^L</i>
	I	<i>bá^H</i>	<i>bá^H</i>	<i>bá^H</i>	<i>bá^L</i>
	C	<i>bá^L</i>	<i>bá^H</i>	<i>bá^{LM}</i>	<i>bá^L</i>

(5)	hit (TA)	1s	1p	2	3
	P	<i>bé:n^M</i>	<i>bé:n^M</i>	<i>bé:n^M</i>	<i>bé:n^M</i>
	I	<i>bé:n^H</i>	<i>bé:n^H</i>	<i>bé:n^H</i>	<i>bé:n^M</i>
	C	<i>bé:n^M</i>	<i>bé:n^H</i>	<i>bé:n^{LM}</i>	<i>bé:n^M</i>

A more thorough description of these inflectional patterns is found in Pace (forthcoming). An exhaustive analysis of verb stems is not, therefore, attempted here, but a number of typical paradigms are listed in (6) as illustrative of the kinds of phonological patterns which are found.

¹The TI forms occur with an inanimate direct object as in 'he hits a rock', while the TA forms occur with an animate direct object as in 'he hits a horse'. Transitivity is discussed further in §2.16.

(6)	bury (TA)	1s	1p	2	3

	P	<i>huá^{ʔL}</i>	<i>hué^{ʔL}</i>	<i>huó^{ʔL}</i>	<i>hué^{ʔL}</i>
	I	<i>huá^{ʔH}</i>	<i>hué^{ʔH}</i>	<i>huo^{ʔH}</i>	<i>hué^{ʔL}</i>
	C	<i>huá^{ʔM}</i>	<i>hué^{ʔH}</i>	<i>hue^{ʔLH}</i>	<i>hué^{ʔL}</i>

2.3. Prefixes. All Chinantec languages tend heavily toward being isolating languages, having only a few affixes, these occurring almost exclusively in verbs. Comaltepec Chinantec is no exception. Person-of-possessor on nouns or person-of-subject on verbs often occurs in phonologically reduced, enclitic form; but otherwise only verbs occur with a small number of inflectional prefixes to mark, in conjunction with the verb root inflection described above, a small number of tense-aspect categories. The few prefixes in question are listed in (12). The interplay of these prefixes and inflectional forms of verb roots is discussed in the

sections which immediately follow. (Derivational affixes are discussed in §2.12.)

- (12) *niL-* (imperfect)
kaL- (past)
laL- (hodiernal past)
niH- (perfect)
laLmiLH- (past imperfect)
haL- (negative)
hoL- (terminative)
laL- (nonentailment)

2.4. Progressive aspect. Progressive aspect is marked by the progressive form of the verb stem, without a prefix. In this form, a verb denotes, usually ambiguously, either a habitual or progressive activity.

- (13) *laLkq:L hmi:LH ku:L iLM ?eLskué:lH*
 each day run^{1s} to school
 Every day I run to school.
- (14) *hmó:Lo taLH sí:nL maLhiL*
 do^{1s} work tear^{1s} paper
 I am working tearing paper.

2.5. Intentive aspect. To indicate an action not yet begun at the time of the speech act, the verb root is internally inflected for intentive aspect. The root does not require a prefix in this form, but usually occurs with the imperfect prefix *niL-*. The semantic force may be simple future or future progressive.

- (15) *niL-hme?LHe lúLM kí:M?*
 IMPF-repair^{1s} instrument of^{2s}
 I will repair your instrument, or I will be repairing your instrument.
- (16) *hqL miLH- niL-?iáL, hqL niL-zilto?LH maLhóLM*
 then when IMPF-boil^{1s}, then IMPF-putⁱⁿ¹² oregano
 Then when it is boiling, add oregano.

In a subordinate clause, the imperfect prefix and intentive stem may occur preceded by the past-tense prefix *kaL-* to give future perfect force.

- (17) *niL-hme?LHna? ?eL ?niúLM dóm karL kaL-niL-té?LM*
 IMPF-DO^{12p} REL house that until PST-IMPF-finish¹³
 You will build the house until it is finished.

2.6. Completive aspect. To denote an activity completed prior to the time of the speech act, the verb stem is inflected for completive aspect. One of the two past-tense prefixes, *kaL-* (past) or *laL-* (hodiernal past), almost always occurs with such a stem, as in (18) and (19).

- (18) *kaL-hméMe taLH gé:M*
 PST-do^{C1s} work yesterday
 I worked yesterday.
- (19) *laL-kĩ?M ?iL hiú:nLH naL s̃i?Hr*
 HOD-clothe^{C3} REL child that clothes³
 That child just now got dressed.

In (17), the past-tense prefix was shown to precede the imperfect prefix with an intensitive stem to indicate future perfect. The imperfect can also precede the past-tense prefix with a completive stem, but in this case the imperfect functions as an evidential, to reduce the degree of responsibility the speaker accepts regarding the truth of the assertion. In (20), the speaker was not an eyewitness of the animal being shot.

- (20) *zán?L moL-lú:LH -re? niL-kaL-tiLM miLtiúLM*
 truly neck³ animal IMPF-PST-reach^{C3} bullet
 The bullet evidently struck the animal right in the neck.

2.7. Perfect aspect. The perfect prefix *niH-* may occur with either the progressive or completive form of a verb root. With a progressive form, it indicates that the action of the verb has begun and continues at the time of the speech act.

- (21) *niH-na:nL hgó:L hmiLnáM*
 PRF-begin^{P3} descend^{P3} rapidly
 It has begun to descend rapidly.

With a completive form, it indicates that the action of the verb had begun and continued at the time of another action which occurred prior to the time of the speech act. The evidential use of the imperfect is not incompatible with the occurrence of the perfect prefix, as (22) shows.

- (22) *zánʔL hīL hueʔL báʔH nīH-niL-kaL-hmé:Lr*
 very fire big AFF PRF-IMPf-PST-make[^]C3
 They had evidently already made a big fire.

The perfect prefix is normally *nīH-*; but with the negative prefix, it has the form *mīLM-*. In this context, a progressive or stative verb denotes an action or state which is yet to be realized at the time of the speech act.

- (23) *haL-mīLM-ŋinʔLM iŋ:L kéMe*
 NEG-PRF-see[^]P2s baby of[^]1s
 You have not yet seen my baby.
- (24) *haL-mīLM-ŋiLMr ʔeL rúnʔLne -inʔ*
 NEG-PRF-know[^]S3 REL relatives[^]-3 3
 They didn't yet know that they were relatives.

The negative perfect also occurs with a completive verb root to indicate an action which has not been initiated at the time of the speech act. The past-tense prefix *kaL-* may or may not be present in this context; apparently the presence of the perfect prefix and the completive inflection of the stem combine to preclude ambiguity.

- (25) *haL-mīLM-kaL-mánMn -reʔ*
 neg-PRF-PST-see[^]C1s animal
 I have not yet seen the animal.
- (26) *haL-mīLM-ŋóMŌ huiLM cuáM*
 NEG-PRF-go[^]C1s road Chuparrosa
 I have not yet gone to Chuparrosa Ranch.

This same form of the perfect prefix, *mīLM-*, also occurs with stative stems, irrespective of the occurrence of negation in the context.

- (27) *gánM .-b zäL mīLM-se:nLr*
 two AFF person PRF-exist[^]S3
 Two people have been created (so far).

2.8. Imperfect aspect. The imperfect prefix *niL-* was shown above to occur optionally with intentive stems to indicate a future action and to occur with completive stems as an evidential. It also occurs with a stative or progressive stem to indicate that a state or an action continues which

was initiated prior to the time of the speech act. With an action such as the third example of (30), the interpretation may be progressive or iterative.

- (28) *niL-zeʔLH -b kaL-bóLH kéMe miLH- kaL-géMe*
 IMPF-sick^{^s3} AFF coparent of^{^1s} when PST-arrive^{^c1s}
 My coparent was sick when I arrived.
- (29) *ha:nL miʔL niL-rá:nL naL*
 one snake IMPF-lie^{^p3} there
 A snake was lying there.
- (30) *niL-ŋjLMr taLH kúnʔLM guiL-táH*
 IMPF-walk^{^p3} work eat^{^p3} cattle
 He was walking around eating cattle.

To indicate a former state or progressive action which no longer continues at a subsequent time or at the time of the speech act, the sequence *laLmiLH-* occurs with a completive stem. This usage can be labelled past imperfect.²

- (31) *laLmiLH-ŋóM h̄jH huiLM heLnu:HL kiáʔMr*
 PST[^]IMPF-go^{^c3} Virginia road ranch of^{^3}
 Virginia used to [habitually] go to her ranch.

2.9. The negative prefix. The negative prefix *haL-* may precede a verb, like any other verb prefix, or it may negate another element which, when negated, must be topicalized by fronting to the first position within the clause.³

- (32) *haL-kué:nL niL-kjʔH ʔoLhui:L*
 NEG-permissible^{^3i} IMPF-pick^{^12} fruit
 It is not permissible for you to pick fruit.
- (33) *haL-ḡH zāLŋiuʔL kéMe miLM-se:nL*
 NEG-AUG man of^{^1s} PRF-exist^{^s3}
 I do not yet have a husband.

²Comrie (1976:80) illustrates a similar relationship between past and imperfect for Arabic.

³Topicalization is discussed in more detail in §3.14.

With verbs, the negative prefix occurs with any of the other aspectual prefixes discussed above.

- (34) *haL-kaL-hméMe tarea kéMe*
 NEG-PST-do¹C1s task of¹s
 I did not do my homework.

- (35) *haL-niL-kó:LHO laLnáM*
 NEG-IMPF-play¹I1s now
 I will not play ball just now.

2.10. Terminative aspect. The prefix *hoL-* (terminative) indicates the cessation of an action which was either in progress or habitual prior to the time of the speech act. It occurs with progressive or stative stems. In related Chinantec languages, the corresponding terminative prefix usually accompanies the negative prefix. In Comaltepec, the terminative prefix itself carries negative force and does not occur with the negative prefix.

- (36) *hoL-kuëLMr huïLM*
 TRM-give¹P3 road
 S/he⁴ no longer permits it.
- (37) *hoL-?i:nLH gíHr núMr haLlé?L hú:H dóM*
 TRM-want¹s3 more³ hear¹I3 PL word that
 S/he no longer wants to listen to those words.

2.11. Nonentailment. The pretonic form *laL-* is ubiquitous in Comaltepec, making it difficult to interpret, but it seems appropriate to consider some of its occurrences as the prefix *laL-* (nonentailment), paralleling the corresponding prefix of other Chinantec languages. With this sense, it occurs with progressive roots to indicate that an action is independent and not the inexorable result of another action or situation. The action 'just happened'. It may focus attention upon an action as being curious or unexpected in some way.

- (38) *laL-si?LM -b ?eL ?maL naL kaL-liL-kiúL*
 NON-stand¹s3s AFF REL WOOD that PST-ACT¹C-dry¹s3
 That tree that dried up is just standing there.

⁴Most third-person forms in Chinantec are ambiguous as to gender and number. Not all translation possibilities are explicitly indicated in illustrations where this fact is not in focus.

- (39) *laL-tu:L -b hmi:L*
 NON-spill[^]P3 AFF water
 The water is just pouring out.

2.12. Derivational prefixes. Most of the discussion to this point relates to prefixation and inflection of active verb stems. I now turn to a brief discussion of the derivational prefixes which change stative verb roots to active verb stems or active verb roots to stative verb stems. First, the activating prefix.

The activating prefix has two forms—one for intensitive and one for progressive or completive. The intensitive form *liL-* (ACT[^]I) indicates that a change of state will take place after the time of the speech act. The second form, *li^L-*, is ambiguously progressive (ACT[^]P) or completive (ACT[^]C), although accompanying inflectional prefixes usually eliminate the ambiguity.⁵

The progressive form indicates that a change of state is habitual or is in progress at the time of the speech act. The completive form indicates that a change of state took place prior to the time of the speech act. The form of the stative root itself does not change with the addition of these prefixes. Inflectional prefixes which normally occur with active roots, but not with stative roots, may occur with these derived active stems.

- (40) *?me^M,* sharp[^]s3i, It is sharp.
li^L-?me^M, ACT[^]C-sharp[^]s3i, It becomes sharp.
ni^L-li^L-?me^M, IMPF-ACT[^]I-sharp[^]s3i, It will become sharp.
ka^L-li^L-?me^M, PST-ACT[^]C-sharp[^]s3i, It became sharp.

- (41) *guⁱ:n^Mr,* angry[^]s3, He is angry.
li^L-guⁱ:n^Mr, ACT[^]P-angry[^]s3, He becomes angry.
ni^L-li^L-guⁱ:n^Mr, IMPF-ACT[^]I-angry[^]s3, He will become angry.
ka^L-li^L-guⁱ:n^Mr, PST-ACT[^]C-angry[^]s3, He became angry.

A stative stem may also be derived from an active root by the stativizing prefix *si^L-*. Such a derived stem may not occur with the inflectional prefixes of active verb forms. Transitivity is normally reduced by the use of this prefix, as can be seen by the following examples. The active root meaning 'plow' is transitive, whereas its stative counterpart is intransitive.

⁵The probable source of this prefix is the inanimate intransitive verb meaning 'happen', as in *li^{LM}* 'happens', *ni^Lli^L* 'will happen', and *ka^Lli^M* 'happened'.

- (42) P S O
hí:L -r ?eL ?uéM kiá?Mr
 plow[^]TIP₃ 3 REL ground of[^]₃
 He is plowing his field.

- (43) P S
siL-hí:HL ?uéM kiá?Mr
 STA-plow[^]P₃ ground of[^]₃
 His ground is plowed.

In a few cases, what would appear to be this same stativizing prefix is added to a stative root to derive an active stem which then is inflected like an active root.

- (44) P S O L
niL-siL-guiM -i kaLhuéLH niLH híL
 IMPF-STA-hot[^]11s 1s coffee face[^]₃ fire
 I will heat the coffee on the fire.

A second stativizing prefix, *riL-*, has a much more limited distribution, but otherwise has the same characteristics as *siL-*.

- (45) P S
riL-kjn?LM si?Hr
 STA-reverse suit[^]₃
 Their clothes are on backwards.

- (46) P MODAL S
riL-?únLM -b -re
 STA-flesh[^]S₃ AFF 3
 They are naked.

2.13. Directional verbs. Directional verbs result when a verb occurs with any of a series of prefixes derived from verbs of motion, to indicate movement by the agent of the action named by the verb. The four prefixes in (47) are paired with the progressive forms of the verb 'go' which may be considered their source. These prefixes occur with active verb stems, other than motion verbs, to indicate that the agent of the action named by the verb stem will move away from the place of the speech act, in conjunction with his or her performance of the action.

- | (47) | go [^] P | prefix | full form | |
|------|-------------------|--------------|----------------|----------------|
| | 1s | <i>niL-</i> | <i>ni:L-i</i> | I am going. |
| | 1p | <i>ziL-</i> | <i>zéLM-e?</i> | We are going. |
| | 2 | <i>guiL-</i> | <i>guoLM?</i> | You are going. |
| | 3 | <i>ziL-</i> | <i>zéLM-r</i> | S/he is going. |
-
- | | | |
|------|--------------------|-----------------------|
| (48) | <i>niL-lá?H-a</i> | I go and bathe. |
| | <i>ziL-lé?H-e?</i> | We go and bathe. |
| | <i>guiL-lé?L</i> | You go and bathe. |
| | <i>ziL-lé?L-r</i> | S/he goes and bathes. |

As can be seen from (47), the verb 'go' is highly suppletive in its progressive forms. It is further suppletive in its completive forms, as can be seen in (49), which are the source of directional prefixes for completive verbs, illustrated in (50).

- | (49) | go [^] c | prefix | full form | |
|------|-------------------|-------------|---------------|------------|
| | 1s | <i>noL-</i> | <i>noM-o</i> | I went. |
| | 1p | <i>noL-</i> | <i>noM-o?</i> | We went. |
| | 2 | <i>giL-</i> | <i>gé:M-?</i> | You went. |
| | 3 | <i>noL-</i> | <i>noM-r</i> | S/he went. |
-
- | | | |
|------|------------------------|-----------------------|
| (50) | <i>kaL-noL-lá?L-a</i> | I went and bathed. |
| | <i>kaL-noL-lé?H-e?</i> | We went and bathed. |
| | <i>kaL-giL-le?L</i> | You went and bathed. |
| | <i>kaL-noL-le?HL-r</i> | S/he went and bathed. |

In natural speech, it is not uncommon to hear the motion verb in its full form, followed by a directional verb having the particular directional prefix based on that motion verb.

- | | | |
|------|--------------------------------------|---|
| (51) | <i>ni:L-i</i> | <i>niL-lá?H-a</i> . |
| | go [^] P1s | go [^] P1s-bathe [^] P1s. |
| | I am going; I am on my way to bathe. | |

There is a second group of directional prefixes based on the motion verb 'come', to indicate motion on the part of the agent toward the place of the speech act. This verb is also extremely suppletive as far as categories of person are concerned, but the same directional forms occur with completive stems as with progressive and intentive stems.

- (52) come prefix full form
- | | | | |
|----|------------------------|---------------------------|-------------|
| 1s | <i>ga^L-</i> | <i>gá^{LM}-a</i> | I come. |
| 1p | <i>ha^L-</i> | <i>há^{LM}-aʔ</i> | We come. |
| 2 | <i>ŋi^L-</i> | <i>ŋi^Lʔ</i> | You come. |
| 3 | <i>ha^L-</i> | <i>há^{LM}-r</i> | S/he comes. |
- (53) *ga^L-siʔ^{LH}-i* I come and untie it.
ni^L-ga^L-siʔ^{LH}-i I will come and untie it.
ka^L-ga^L-siʔ^{LH}-i I came and untied it.
- (54) *ha^L-siʔ^{PHM}-iʔ* We come and untie it.
ni^L-ha^L-siʔ^{PHM}-iʔ We will come and untie it.
ka^L-ha^L-siʔ^{PHM}-iʔ We came and untied it.
- (55) *ŋi^L-siʔ^{LH}* You (sg) come and untie it.
ni^L-ŋi^H-siʔ^{LH} You (sg) will come and untie it.
ka^L-ŋi^L-siʔ^{LH} You (sg) came and untied it.
- (56) *ha^L-siʔ^{LH}-r* S/he comes and unties it.
ni^L-ha^L-siʔ^{LH}-r S/he will come and untie it.
ka^L-ha^L-siʔ^{LH}-r S/he came and untied it.

There are two more partial paradigms of directional prefixes to indicate ‘arrival’ of an agent either away from or at the place of the speech act. They are partial in that they only occur with third-person agents, excluding the interlocutors.⁶

- (57) prefix full form
- | | | |
|-------------------------|----------------------------|---------------------|
| <i>gi^L-</i> | <i>gé^{LM}-r</i> | S/he arrived there. |
| <i>gui^L-</i> | <i>gué:n^M-r</i> | S/he arrived here. |
- (58) *kɔ:^L hmi:^{LH} ka^L-gi^L-guä^L tiú^H hui^{LM} dó^M*
 one day PST-ARR-sit Peter road there
 One day Peter arrived to sit there.
- (59) *ka^L-gui^L-hé:n^L ʔi^L zä^L dó^M la^L-ŋi:n^M ʔin^{LH} hó^L*
 PST-ARR-bring REL person that various kind animal
 That man arrived here bringing all kinds of animals.

⁶A more complete discussion of verbs of motion in a related Chinantec language is found in Westley and Merrifield (to appear).

2.14. Pseudodirectional verbs. The large majority of directional verbs indicate motion of an agent, as indicated in the preceding section. There are a small number of verbs, however, in which directional prefixes have a variety of derivational functions without implying any real motion of the sort indicated above.

Two of the directional prefixes may occur with certain stative roots to derive active stems—*zi^L-* to indicate change of state after the time of the speech act, *ηo^L-* to indicate change of state prior to the time of the speech act.

- (60) *zi^L-ʔa^{LH} hmi:^L zi^{LM}*
 go[^]i-contain water inside
 It will fill with water.
- (61) *zi^L-gá^L zi^{LM} zä^L*
 go[^]i-lose[^]3 heart[^]3 3
 S/he/they get(s) upset.
- (62) *ka^L-ηo^L-kan^{ʔLM}-b-re*
 PST[^]go[^]c3-confuse-AFF-3
 He got confused.
- (63) *ηo^L-huí:n^M zä^L*
 go[^]c-many person
 The number of people increased.

A second derivational function of these prefixes is to reduce transitivity. The root meaning 'rob' is normally transitive inanimate. With the pseudodirectional prefix, the agent is suppressed and the inanimate object is promoted to subject, resulting in an inanimate intransitive verb. No motion is implied, and it would be inappropriate for a full motion verb to precede this verb in the manner illustrated for true directional verbs.

- (64) *ni^H-ni^L-ηo^L-ʔín^L -b kuí^{LM}i*
 PRF-IMPF-go[^]c-rob[^]s3 AFF firewood[^]1s
 My firewood has evidently been robbed.

2.15. Verbs and noun gender. All Comaltepec nouns are either animate or inanimate in gender. Nouns which name members of the animal kingdom, including homo sapiens, are animate; all other nouns are inanimate, with the exception of a small number of nouns which name

celestial bodies or atmospheric phenomena, such as sun, moon, stars, lightning, and rainbow. These also are animate, presumably because of their personification in Chinantec oral traditions and because of persisting metaphysical views related to them.

The gender of nouns is not overtly expressed in the noun itself, but rather in the inflection of other word classes related to them syntactically—quantifiers, deictics, modifiers, and verbs. Some of these matters will be discussed elsewhere, but as regards the inflection of verbs, an ergative system of agreement exists. An intransitive verb agrees in gender with its subject, while a transitive verb agrees in gender with its object.

- (65) P S
ka^L-tóʔ^L *hi^L*
 PST-fall[^]IC3 book
 The book fell.
- (66) P S
ka^L-ténʔ^L *zi:^L*
 PST-fall[^]AIC3 dog
 The dog fell.
- (67) P S O
ka^L-kuë^{LM} -r *ku:^M*
 PST-give[^]TIC3 3 money
 He gave money.
- (68) P S O
ka^L-kuën^{LM} -r *kú^H*
 PST-give[^]TAC3 3 pigs
 He gave pigs.

Normal inanimate gender is sometimes rhetorically upgraded to animate to indicate a closer association or greater involvement between the speaker and the named object. In (69), the verbform ‘lie’ would normally be inanimate intransitive (II), rather than animate intransitive (AI), to agree with the *normally* inanimate noun ‘rocks’.

- (69) L P S
dóm -b nán^{LM} ha-lén^{PL} ká:l^{LH} kiá^{PM} ?niú^{LM} ?mí:^M
 that AFF lie^{AIP3} PL rock of³ house new
 There lie the rocks [which have been gathered for the construction]
 of the new house.

The following two examples show interesting uses of the animal pronoun *-re?* to both rhetorically upgrade an inanimate referent and, conversely, to downgrade a human one. In (70), the pronoun appears to be in cross-reference with the topicalized inanimate noun *ze:^M* ‘crime’, upgrading it to the lowest degree of animate status. In (71), an unforgiving person is rhetorically downgraded by use of the animal pronoun as subject.

- (70) NEG S[Q] H] P S L
haL- ?eL ze:^M säL -re? kéMe
 NEG REL crime exist³ animal of^{1s}
 I am guilty of no crime.

- (71) P S O O
haL-kaL-?i:n^M -re? -r ze:^M kiá^{PM} ?iL zäL dóm
 NEG-PST-destroy³ animal 3 crime of³ REL person that
 S/he did not forgive him/her his/her crime.

2.16. Transitivity. A Comaltepec verb is intransitive, transitive, or ditransitive as defined by the number of nominals which may occur with it within the clause. An intransitive verb may occur with one nominal, a transitive verb with two, and a small set of ditransitive verbs with three. These three degrees of transitivity are illustrated in (72)–(74). The first of these is inanimate intransitive (I)—the verb may occur with one inanimate nominal. The second is transitive inanimate (II)—the subject nominal is always animate (at least conceptually), the object nominal always inanimate. The third is ditransitive inanimate (DI)—the subject nominal is always animate, the first object following is always animate, and the second object is always inanimate.

- (72) P S
ñi^{LM} kə:l bə^{PLH}
 walk^{IIP3} one round^{object}
 The car is moving.

- (73) P S O T
kaL-kuë^{LM} -r ku:^M kiá^{Mr} gé:^M
 PST-give[^]TIC3 3 money of[^]3 yesterday
 He gave his money yesterday.

- (74) P S O O
kaL-kuë^{LM} -r ?i^L zä^L haLlé^{PL} ku:^M
 PST-give[^]DIC3 3 REL person PL money
 S/he gave the person the money.

The corresponding animate verbs are illustrated below. The first is animate intransitive (AI)—the subject nominal is always animate and no other nominal may occur in the clause. The second is transitive animate (TA)—the subject is normally animate and the object is always animate. The third is ditransitive animate (DA)—the subject is always animate, the first object is always animate, and the second object is always animate.

- (75) P S
kaL-tén^{PL} ?i^L hiú:n^{LH} dó^M
 PST-fall[^]AIC3 REL child that
 That child fell.

- (76) P S O T
kaL-kué:n^L -r ?i^L kú^H na^L gé:^M
 PST-give[^]TAC3 3 REL pig that yesterday
 S/he gave that pig yesterday.

- (77) P S O O
kaL-kuën^{LM} -r ?i^L hiú:n^{LH} la^L haL-lén^{PL} zäLlí:^{LH}
 PST-give[^]DAC3 3 REL child this PL doll
 He gave this child the dolls.

There are two types of ditransitive roots in Comaltepec, both of which cross reference three nominal constituents, a subject and two objects. In the first type, the first object is a semantic source or goal which is always animate, and the second object is a semantic patient which may be inanimate (DI) or animate (DA).

- (78) P S O O
kaL-miʔLM -r ha:nL siLmiʔH kq:L hiL
 PST-ask[^]DIC3 3 one girl one book
 S/he asked a young lady for a book.
- (79) P S O O
kaL-miʔLM -r ha:nL siLmiʔH ʔiL kuäLH dóm
 PST-ask[^]DAC3 3 one girl REL horse that
 S/he asked a young lady for that horse.
- (80) P S O O
kaL-ʔé:M -e miʔH kéMe kq:L hiL
 PST-indicate[^]DIC1s 1s child of[^]1s one book
 I pointed out a book to my little girl.
- (81) P S O O
kaL-ʔé:nM -n miʔH kéMe ʔiL kuäLH dóm
 PST-indicate[^]DAC1s 1s child of[^]1s REL horse that
 I pointed out that horse to my little girl.

With this type of ditransitive clause, no nominal can be deleted without changing the inflectional paradigm of the verb, and any of the three nominals may be topicalized by moving it to the left of the verb.

- (82) S P S O O
ʔiLb kaL-miʔLM -r ha:nL siLmiʔH kq:L hiL
 3[^]AFF PST-ask[^]DIC3 3 one girl one book
 It was s/he who asked a young lady for a book.
- (83) O P S O
ha:nL siLmiʔHb kaL-miʔLM -r kq:L hiL
 one girl^{^(AFF)} PST-ask[^]DIC3 3 one book
 It was a young lady whom s/he asked for a book.
- (84) O P S O
kq:L hiLb kaL-miʔLM -r ha:nL siLmiʔH
 one book^{^(AFF)} PST-ask[^]DIC3 3 one girl
 It was a book for which s/he asked a young lady.

In the second type, the first object is a semantic patient which may be inanimate (DI) or animate (DA), and the second object is a semantic instrument which is always inanimate.

- (85) P S O O
ʔé:M -e ʔe^L ɲi^Hhli:^{LH} dó^M hmi:^L

 It is that young man whom I will stab with a knife.

Although ditransitive verbs cross reference three nouns which may occur directly with them without prepositions, it is not common for a verb to occur with all three nouns overtly present. It is more common to reduce nominal reference to pronouns, and if it is necessary to introduce several nouns into one part of a narrative, to do so by the use of paired verbs, with each verb having one, or at the most two, nouns as its adjuncts. This may be illustrated by the sequence of two sentences in (93) and (94).

- (93) *ʔe^{LM} ʔi^L tu^L-hua^{ʔLM} la^L hu^L-ʝi^{ʔH};*
 teach[^]TIP3 REL teacher this Spanish
 This teacher teaches Spanish;

- (94) *ʔe^{ʔLM} -r ha^L-léⁿʔ^L zä^L-mí^L*
 teach[^]DIP3 3 PL woman
 s/he teaches it to the women.

For Palantla Chinantec, Merrifield (1968:30f) described an inflectional category, which he called ECHO, in which pairs of verbs differ as between a first-time action and a related one which is in some sense not a first occurrence. Comaltepec also exhibits this same inflectional category, as in the paired verbs of (95).

- (95) *hmó:^{L-r} ‘s/he makes’ hmo^{ʔLM-r} ‘s/he repairs’*
ʔnǎ:^{L-r} ‘s/he sells’ ʔni^{ʔLM-r} ‘s/he resells’
ʔné:n^{L-r} ‘s/he seeks’ ʔnéⁿʔ^{LM-r} ‘s/he hunts’

This inflectional category is seen to be marked in part by glottal closure of the root syllable, and in part by other changes such as length and tone. This same change in form occurs between pairs of verbs differing in degree of transitivity, the second member of the pair being ditransitive of the first type (with source or goal as first object).

- | | | | | |
|------|----------------------------|------------------------------|-----------------------------|------------------------------|
| (96) | <i>kuë^{LM-r}</i> | 's/he gives ^{TI} | <i>kuë^{?LM-r}</i> | 's/he gives ^{DI} |
| | <i>kuë:n^{L-r}</i> | 's/he gives ^{TA} | <i>kuën^{?LM-r}</i> | 's/he gives ^{DA} |
| | <i>mi^{LM-r}</i> | 's/he requests ^{TI} | <i>mi^{?LM-r}</i> | 's/he requests ^{DI} |
| | <i>?e^{LM-r}</i> | 's/he teaches ^{TI} | <i>?e^{?LM-r}</i> | 's/he teaches ^{DI} |
| | <i>hu^{f:L-r}</i> | 's/he whistles ^{TI} | <i>hui^{?L-r}</i> | 's/he whistles ^{DI} |

2.17. Changing transitivity. Verb roots often participate in more than one inflectional paradigm which differ from each other in gender and in transitivity, as indicated in the preceding discussion. Apart from such inflectional means of changing transitivity, there are also certain prefixes which change the degree of transitivity of roots. One such prefix is the prefix *hmiL-* - *hmi^L-* (CAUSATIVE). This prefix changes the role structure of a clause, usually adding an agent which almost always adds a nominal to the clause, thereby increasing the syntactic transitivity of the verb. This may also entail the demotion of an existing subject to object. The phonological form of the root is, in some cases, changed in the presence of the prefix.

- | | | | | |
|-------|--|----------------------------------|------------------------|--|
| (97) | P | S | | |
| | <i>kiy^L</i> | <i>?e^L</i> | <i>?uë^M</i> | <i>dó^M</i> |
| | dry ^{II} S ₃ | REL | ground | that |
| | That ground is dry. | | | |
| (98) | P | S | O | |
| | <i>hmi^L-kiy^M</i> | <i>-u</i> | <i>mí^{?H}</i> | <i>ka^L-hué^{LH}</i> |
| | CAUSE-dry ^{TIP} _{1s} | _{1s} | seed | coffee |
| | I am toasting coffee beans. | | | |
| (99) | MA | P | S | |
| | <i>hmi^L-ná^M</i> | <i>kua:n^L</i> | <i>?j^L</i> | <i>kú^H la^L</i> |
| | fast | grow ^{AIP} ₃ | REL | pig this |
| | This pig is really growing fast. | | | |
| (100) | P | S | O | |
| | <i>hmi^L-kuá:n^L</i> | <i>-n</i> | <i>kú^H</i> | |
| | CAUSE-grow ^{TAP} _{1s} | _{1s} | pig | |
| | I raise pigs. | | | |

The addition of an agent by the causative prefix does not always entail an increase in syntactic transitivity. Three pairs of verbs follow. The first

two verbs are both intransitive, but entail different role structures. The first verb is stative with a patient as subject; the second is active and semantically middle with subject as both agent and patient.

- (101) P S
le:n^M -n
 wet[^]AIS1s 1s
 I am wet.

- (102) P S
hmiL-lé:n^L -n

 IMPF-GO¹I-steal³ firewood if lie^{s3p} where appear^{s3}
 Firewood will be stolen if placed where it can be seen.

2.18. Plural number. Verbs are not, generally, marked for plural number. There is a small set of verbs, however, which is suppletive, having separate singular and plural forms. Most of these are positional verbs. Within this set of verbs, intransitive roots distinguish the number of their subjects; transitive roots distinguish the number of their objects.

- (113) P L S
ʔiu:^{nM} *ʔe^Lskué:^{1LH}* *ʔi^L* *hiú:^{nLH}* *la^L*

- (120) P S O L
giaM -a *hiL* *huiLM* *niLH* *mesLH*
 lay[^]P1s 1s book road face table
 I place the books on the table.

2.19. Doubled verbs. There are some verbs in Comaltepec Chinantec which are formed from two verb roots, resulting in a two-syllable verb stem. These often emphasize the totality of an act. The first stem is marked with the tense prefix, the second stem is inflected for aspect and person.

- (121) *kiú:L* -r *moLniLHr*
 punch[^]P3 3 face[^]3
 He punches his face.

- (122) *ʔé:L* -r *kiáPM* *ʔiL* *zäL* *dóM*

- (126) *hloPHb* *kaL-ʔiPM-gé?L* *ʔiL* *zäL* *naL* *gé:M*
 lovely[^]AFF PST-drink[^]C3-eat[^]C3 REL person that yesterday
 That person really ate well yesterday.

2.20. The negative word ʔóʔL. The negative prefix (§2.9) and the terminative prefix (§2.10) have already been introduced. In this section the negative word ʔóʔL is discussed. More study of negation as a general phenomenon in Chinantec is needed, and the final interpretation of this negative word must be postponed; but, for the moment, I am treating ʔóʔL (negative) as a special sort of stative verb which functions as a predicate, since it seems to give more attention to the negation than does the negative prefix.

If treated this way—as a predicate—its subject is commonly an entire clause, as in (127).

- (127) MA P S[P S]
 zánʔL ʔóʔL so:L ziLM ʔiL zäL naL
 truly NEG rise heart^3 REL person that
 That man is definitely not mean.

- (128) P S[Q H M[COMP P S[P S]]]
 ʔóM ha:nL zäLɲiuʔL ʔiL ʔóʔL kiáʔMr Ø
 go^c3 one man REL NEG of^3
 A man who is not her husband went.

In (129), it negates a noun phrase with almost the same meaning as can be accomplished by use of the negative prefix. Perhaps the negative word ʔóʔL here implies that the speaker understands a language other than Spanish. This needs to be checked more carefully.

- (129) P S[H M[P MODAL O]]
 ʔóʔL huLɲiʔM ɲénʔL báʔH Ø
 NEG Spanish understand^P1p AFF^1p
 It is not the SPANISH language that we understand (but another one).

- (130) P[NEG-H M[P MODAL O]]
 haL-huLɲiʔM ɲénʔL báʔH Ø
 NEG-Spanish understand^P1p AFF^1p
 We do not understand the SPANISH language.

The negative word may interact with the negative prefix in a dialogue. In sentences (131) and (132), the first speaker uses the prefix; the second the negative word.

- (131) P S O
ha^L-ɲi^M -i ʔi:^L ʔi^L na^L
 NEG-know[^]P1s 1s who REL that
 I do not know who that is.

- (132) P S[P S O]
ʔɔ^{ʔL} tó:^L ʔo^{ʔLM} hia^L si:^L ʔi^L zä^L na^L
 NEG stick[^]P3 heart[^]2 how name[^]S3 REL person that
 You do not even know what his name is.

A clause with the negative verb as predicate, when marked as interrogative by the yes-no interrogative word *sú^H*, implies a positive answer to the question.

- (133) ? P S[H M[COMP P S O O]]
sú^H ʔɔ^{ʔL} ʔniu^L zä^L kiu^{ʔLM} Ø ta^{LH} ha^Llén^{ʔLr}
 ? NEG 2s person cut[^]P2 work PL[^]3
 Are not you the person who rules all of them?

The negative word may also be phonologically reduced to *ʔo^L-* and combined with the augmentation modal adverb to form the noninitial member of a series of negative words or clauses.

- (134) P S L NOR L
ha^L-sin^{ʔLM} -r ki^Lni^{HM} ʔi^L hién^{ʔL} ʔo^L-gí^{ʔH} ki^Lni^{HM} dié^{LH}
 NEG-stand[^]P3 3 before REL other NEG-AUG before god
 They do not stand before another nor before a god.

- (135) P S NOR S
ha^L-ni^L-tiú^L hmi^{ʔLM} ʔo^L-gí^{ʔH} ʔmo^{ʔLH} niú^{LM}
 NEG-IMPV-pour[^]I3 rain NEG-AUG dew star
 It will neither rain nor will it dew.

- (136) NOR S P O O

súʰ ʔnéʰ niL-kiM -naʔ ku:M ʔʔL-huáʰʰ haL-ʔnéM ʔéL
? need IMPF-pay^11p 1p money NEG-if NEG-need
 Do we need to pay money or not?

The negative adverb *ʔuLH* ‘no’, used as an interjection, would appear to be derivationally related to *ʔʔL*.

- (139) P; P S
ʔuLH ʔʔL kuäLH naL
 no NEG horse that
 No, that is not a horse.

3

The Comaltepec Chinantec Clause

The minimal form of a declarative clause in Comaltepec Chinantec is the predicate constituent. It may also include nominal and adverbial constituents. This chapter describes the predicate and nominal constituents of a clause first, under the heading PRIMARY CONSTITUENTS. It then presents various adverbial constituents under the title SECONDARY CONSTITUENTS. A third major section describes a number of INTERSENTENTIAL RELATIONS which may be found between two successive clauses, specifically, purpose, result, cause, condition, temporal sequence, and comparison. A final section of the chapter briefly discusses TOPICALIZATION.

3.1–3.2 Primary constituents

Because the predicate constituent in a Comaltepec Chinantec clause inflectionally cross-references one or more nominal constituents, these are considered the primary constituents of a clause. The predicate is discussed first, followed by nominals.

3.1. The Predicate. The predicate in Comaltepec Chinantec is normally the first major constituent in a clause. The prototypical predicate for actions and processes is a verb, the characteristics of which were discussed extensively in the preceding chapter. The reader will thus recall that, in addition to inflection for person-of-subject and for aspect within any given inflectional paradigm, each verb root participates in one or more separate paradigms which cross-reference from one to three nominal constituents within the clause and also the gender of one of those constituents.

- (140) P S O
hmó:L zǎL ta^{LH}
 do[^]P3 people work
 People work.

- (141) P S L
ka^L-ŋó^M ʔi^L zi:^L dó^M hui^{LM} mó^{ʔL}
 PST-go[^]C3 REL dog that road mountain
 That dog went to the mountain.

In Comaltepec, a stative verb normally predicates description or attribution.

- (142) P S
hue^{ʔL} -b ʔe^L mó^{ʔL} dó^M
 big[^]S3 AFF REL mountain that
 That mountain is big.

- (143) P S
giún^M -b ʔi^L zǎ^L la^L
 good[^]S3 AFF REL person this
 This man is good.

To predicate identification a nominal form is made an intransitive predicate by the postposition of a modal adverb.¹ In the case of an inalienable noun naming the referent, the modal adverb intervenes between the noun and its possessor.

- (144) P[H MODAL PO] S[Q H D]
rún^{ʔL} b^{ʔH} -i ʔi^L si^Lm^{ʔH} na^L
 kinsman CONT 1s REL woman that
 That young woman is my kinsman.

The BE verb *lín^{LM}* may alternatively be used to predicate identity, as in the first example below, and other miscellaneous conditions for which other constructions will not serve, as in the second example below.

¹Modal adverbs are discussed in §10.

- (145) P S O
lín^{LM} ?i^L dóm tu^Lhua^{PLM}
 BE[^]P3 REL that teacher
 That person is a teacher.
- (146) P S O
ka^L-lín^M iü^{:L} ké^{Me} hlē^{PLH}
 PST-BE[^]C3 baby of^{1s} measles
 My baby had measles.

A number of verbs of position are available to predicate location, each verb indicating some aspect of physical orientation, such as lying, sitting, standing, and so forth. Most verbs of position are stative and suppletive, having separate roots to mark singular and plural subject.

- (147) P S L
si^{PLM} kɔ^{:L} ?ma^Lkí^{:HL} ?e^L dóm
 stand[^]s3s one pine REL that
 There is a pine tree over there.
- (148) P S L
tän^{PLH} ha^L-lén^{PL} hiú^{:nLH} hui^{LM} ?es^Lkué^{:LH}
 BE[^]IN[^]S3p PL child road school
 The children are in school.

There is also a BE verb which predicates existence which has both an animate and inanimate form. This verb is also used to predicate possession or allocation.

- (149) P S L
se^{:nL} hó^{PL} hui^{LM} mó^{PL}
 exist[^]s3 animal road mountain
 There are animals in the mountains.
- (150) P S
säl ?ni^{LM} mán^{PLM} to^{:L} ké^{Me}
 exist[^]s3 three hand banana of[^]1s
 I have three hands of bananas.

3.2. Nominal constituents. A verb permits either one, two, or three nominals—a subject and up to two objects. A nominal constituent may be a noun phrase, a name, a pronoun, or a sentential complement. Comaltepec Chinantec is a vso language, a second object sometimes following the first. In terms of the semantics of ditransitive clauses, if the first object is source or goal, the second is a patient; if the first object is a patient, the second is an instrument.

- (151) P s
kaL-tóʔL *kʔ:L kú:LH*
 PST-fall[^]c3 one rock
 A rock fell.
- (152) P s o
kaL-kué:nL *huan ha:nL kuäLH*

 want[^]s1s 1s REL rub[^]P2s chili tortilla[^]1s
 I want you to put chili sauce on my tortilla.

3.3-3.6 Secondary constituents

Secondary constituents are adverbial. They are all optional, and do not affect the choice of verb nor its inflection in the way that primary constituents do. These include manner, locative, associative, and vocative constituents. Only two, or at most three, secondary constituents normally occur in any one clause. They are most often expressed by a word or a prepositional phrase.

Secondary constituents normally follow the primary constituents unless topicalized. Only the manner constituent seems to carry the same prominence whether preceding or following the predicate. If a clause includes both a spatial and temporal locative, the spatial locative usually occurs closer to the predicate constituent than the temporal locative.

3.3. The manner constituent. The manner constituent is the only constituent which normally may precede the predicate without implying prominence. It expresses manner or intensity of action.

It may be a word, phrase, or clause. Words which occur in this position are usually adverbs of manner or intensity. Adverbs of intensity may in themselves form phrases with one adverb modifying another. Some of the adverbs of intensity occur only preceding the word they modify, others only follow, and if either of these occur elsewhere, it indicates prominence. A few adverbs may take either position. The adverb *ʔá̃n^{LM}* 'really' may occur either before or after the word it modifies.

- (156) MA O P MODAL
zǎ̃nʔ^L *ha^L-hu^Lŋi^{PM}* *ii:n^M* *ba^{Ma}*

hé:^{LH} 'among' *la^Lhé:^{HM}* 'right among'
kó?^L 'because' *la^Lkó?^L* 'thus'

The manner constituent may be an independent clause, as in (165) and (169).

- (169) P MA[MA P S O]
gui^Llí:n^Mna?^{iHkó?^L} *?í:^{LH}* *hnä?^H* *mí^Lkui^{iH?}pie:^L*
 arrive[^]C1p only want[^]S1p 1p wheat
 We have only come wanting (to obtain) wheat.

3.4. Locative constituents. The locative constituent locates an event in time, space, or in the abstract. It normally follows the primary constituents. If both a spatial locative and temporal locative occur in a single clause, the spatial locative usually occurs closer to the predicate. Some of the prepositions which introduce locative phrases serve for both temporal and spatial locatives, others are more specifically one or the other. Prepositions are discussed in further detail in §9.

The temporal locative constituent may be an adverb, a noun phrase, or a prepositional phrase. The most common preposition used to introduce temporal locatives is the proclitic *mi^{LH}-*.

- (170) T P S L
mi^{LH}- la^L?e:^L ŋi^M -i hui^{LM} ?niu^Lhui^L
 when morning walk[^]P1 1s road town[^]hall
 In the morning I walk to the town hall.

- (171) P S T
ka^L-tá:n^{LH} -na? tɔ̃^M hmi:^{LH}
 PST-be[^]C1p 1p two day
 We were there for two days.

- (172) P S O T
ha^L-ka^L-tá?^M -a gui:^M la^Lhé:^{HM} ?u:^L
 NEG-PST-cope[^]C1 1s cold during night
 I could not cope with the cold during the night.

In (173) the temporal adverb *mi^Lhuí:n^L* ‘right then’ is in apposition with a prepositional phrase as temporal constituents of a clause, and in (174) *gi^L?nèn?^{HM}* ‘same time’ is the temporal constituent of a clause embedded as object of a preposition.

- (173) T T P S
mi^{LH}- ka^L-gé^{Me} mi^Lhuí:n^L ka^L-tɔ̃:^{Lb} hmi:^{LM}
 when PST-arrive[^]C1s precise[^]time PST-pour[^]C3[^]AFF rain
 Immediately when I arrived it began to rain.

- (174) T P S
la^Lhé:^{HM} gi^L?nèn?^{HM} tɔ̃^{LM} ?ié^L ka^L-tɔ̃:^L hmi:^{LM}
 during same[^]time reach[^]P3 sun PST-pour[^]C3 rain
 Right while the sun shone, it rained.

A spatial locative may have realizations similar to that of a temporal locative. This constituent may be expressed as a word, noun phrase, or prepositional phrase. With a verb of motion as predicate of the matrix clause, it often has a spatial constituent embedded as possessor of the locative noun *hui^{LM}* ‘road’.

(175) T P S L[H PO]
kɔ:L neʔLH kaL-ŋóM -o huiLM móʔL
 one time PST-go^c1 1s road mountain
 Once I went to the mountain.

(176) P S L[H PO[H PO]]
ŋóLM -naʔ huiLM zeʔL móʔL dóM
 go^p1 1p road side mountain that
 We were going up that mountain.

3.5. The associative constituent. The associative constituent identifies a person who accompanies the agent of an action or an object used by the agent in performance of an action. It is a clause based on the stative transitive verb ‘accompany’. Its direct object may be animate or inanimate. As a predicate, it may be marked for tense-aspect (like any other stative verb) although this usually implies an illicit sexual liaison.

(177) P S O
kɔʔLH -o -re
 with^p1 1s 3
 I accompany her/him.

(178) P S O
kaL-liL-kɔʔLH -r zäLmíL hiénʔL-b
 PST-ACT-with^c3 3 woman other-AFF
 He ‘accompanied’ another woman.

(179) P S O
niL-liL-kɔʔLH -r ha:nL zäLmíL hiú:nLH
 IMPF-ACT-with^i3 3 one woman child
 He will ‘accompany’ a very young woman.

When a clause with this verb functions as the associative constituent of a matrix clause, the associative verb may be interpreted as having an unmarked equi subject with the matrix verb. Intransitive matrix verbs are illustrated in (180).

- (180) P ASSOC[P O] T
ŋó^Mo kɔʔ^{LH} diá:^H gé:^M
 go[^]c1s with Diane yesterday

kʔLH laLiá:nLH ŋiLM-b lʔnLM ʔiL zälʔi:LH laL
 with only thread-AFF happen^P3 REL doll this
 This doll is made just of thread.

3.6. The vocative constituent. The vocative constituent may be a personal name, a kinship term, or a personal pronoun, sometimes with a descriptive element as modifier. Comaltepec Chinantec personal names are based on the stressed syllable of Spanish personal names. They are used to attract someone's attention, to express courtesy, or to remind someone of a relationship and its responsibilities. They are usually only used with questions, commands, or when addressing a group. They either open or close a conversation and are not used throughout a discourse.

- (190) O P S L VOC
ʔeLH hmó:L -ʔ naL hiú:nLH
 what? do^P2 2s there kid
 What are you doing there, kid(s)?

- (191) VOC P L
béʔH, guaL hé:LH kuí:LH
 Bob go^! among firewood
 Bob, go get some firewood!

- (192) VOC P S O
zä^L *rú^Lna?*, *niú:^M* *ná^L* *hú:^H* *ké^Me*
 person kinsman^{1p} listen[!] 2p word of^{1s}
 My brother(s), listen to me!

3.7–3.12 Intersentential relations

Two clauses in sequence may have any of several logical relations between them. The following sections of this chapter present some of the constructions commonly found in Comaltepec to mark such relationships as purpose, result, cause, condition, temporal sequence, and comparison.

3.7. Purpose. The primary means for indicating purpose is an independent clause with the inanimate relative word as complementizer, following a GROUND² clause. The verb of the purpose clause may be inflected for completive aspect if the ground clause is so inflected; otherwise, it is inflected for intentive aspect.

- (193) GROUND
ka^L-só^H *ba^La?* *hui^{LM}* *mó^L*
 PST-ascend^{C1p} AFF^{1p} road mountain
 PURPOSE
?e^L *ka^L-ŋo^L-tin^Lna?* *hui^{LM}* *hue^L*
 REL PST-go^{C1p}-reach^{1p} road big
 We went up the mountain to get to the highway.

- (194) GROUND
ka^L-sá^r?r *bě^LH*
 PST-grab^{C3} vehicle
 PURPOSE
?e^L *ŋó^Mr* *hui^{LM}* *li^LH* *ŋo^L-hmé:^Lr* *ta^LH*
 REL go^{C3} road where go^C-do^{C3} work
 He caught the bus in order to go to work.

²The term GROUND is here used for a syntactically unmarked clause with relationships to an adjacent marked clause—whether the latter is purpose, result, or cause.

- (195) GROUND PURPOSE
ʔiu:ʔn -bre huiʔLM ʔeL niL-zéMr niL-kuʔʔH
 BE*IN*ʔ3s AFF^3 road REL IMPF-go^I3 Oaxaca
 He is on the trail in order to go to Oaxaca.

3.8. Cause. Cause and result relations between adjacent clauses in Comaltepec may be marked in a variety of ways. Perhaps the simplest way is for an unmarked (GROUND) clause, stating a RESULT, to precede a CAUSE clause marked as cause by *kóʔL* ‘for’, either with or without the adversative conjunction *ziuʔH-* preposed to it, as in (196). Alternatively, the RESULT clause can be marked like a PURPOSE clause by the inanimate relative word as complementizer, as in (197).

- (196) GROUND (RESULT) CAUSE
zínʔM niʔH-guʔ:M kóʔL huiʔLM móʔL bíʔ
 very PRF-cold for road mountain CONT
 It was really freezing, it being in the mountains.

- (197) GROUND (RESULT)
ʔánʔMb so:L ziʔLM ʔiL hiú:nʔH naʔ
 really^AFF ascend^P3 heart^3 REL child that

CAUSE

ziuʔH-kóʔL laʔL-hóʔL-b línʔLM tiʔL kíáʔHr
 but-for thus-that-AFF BE^P3 father of^3

That child is very mean because his father is the same way.

- (198) RESULT
ʔeL ʔniʔʔL ní:nMr tuʔLhuaʔLM
 REL irritable see^P3 teacher

CAUSE

ziuʔH-kóʔL ʔeL líʔH -b zāʔL dóm
 but-for REL able^P3 -AFF person that

He is enemies with (sees irritably) the teacher because that person is so capable.

The cause clause can either follow the result clause, as in (196)–(198), or can precede it, as in (199).

(199) CAUSE

kóʔL ʔeL laL-báʔH ʔánLM uínLM kaL-hmé:L kéMe
 for REL thus-AFF really hard PST-do^P3 Of^1s

RESULT

ʔeL haL-huLʔiʔM sí:LHnaʔ síLniú:H kéMe
 REL NEG-Spanish speak^P1p household of^1s

It was so difficult for me because we did not speak Spanish in my home.

Two additional conjunctions are found which mark cause clauses, *ʔuiʔLH* 'because' and *laLʔánLM* 'by means of'.

(200) CAUSE

RESULT

ʔuiʔLH ʔeL síL-uí:L guó:L0 hqL báʔH haL-kaL-kó:L0
 because REL STA-hurt^3 hand^1s that AFF NEG-PST-play^C1s
 Because I hurt my hand, I did not play.

(201) CAUSE

laLʔánLM ʔeL bí:nM -b ʔeL ʔmaL laL
 by^means^of REL strong^S3 AFF REL WOOD this

RESULT

hqL báʔH kaL-táʔM
 that AFF PST-resist^C3

Because this wood is so strong, it resisted.

(202) CAUSE

laLʔánLM kqʔLH kuäLH báʔH
 by^means^of with^3 horse AFF

GROUND (RESULT)

kaL-réʔMnaʔ laLhiL lé:LH
 PST-able^carry^C1p all baggage

It was by means of horses we were able to carry all of the baggage.

3.9. Result. Purpose and result are seen to be closely related concepts as far as their encoding in Chinantec syntax is concerned. Both may be marked by the inanimate relative word. The sentences in (200)–(202) show that result may also be marked by the inanimate anaphoric deictic *hɔ^L* ‘that’ and one of the modal adverbs, or may be unmarked by a conjunction as was indicated earlier in (196)–(198). Two additional sentences in (203) and (204) illustrate result clauses marked by *hɔ^L* ‘that’.

(203) CAUSE RESULT
kɔ^P ʔi:nLHn ʔeL giún^M ba^{Ma} hɔ^L bá^{ʔH} gé^{ʔLē} ʔi^{Mi}
 for want^{1s} REL well^s AFF^{1s} that AFF eat^{1s} tortilla^{1s}
 Wanting to be well, I eat my food.

(204) CAUSE RESULT
ziu^H-kɔ^P ha^L-ka^L-tɔ^L hmí^{LM} hɔ^L bá^{ʔH} ʔle^L la^L-ná^M
 but-for NEG-PST-pour^{C3} rain that AFF dust now
 Because it did not rain, so then now it is dusty.

3.10. Condition. The conditional word *son^L* ‘if’ introduces the protasis of a simple conditional sentence. The protasis may precede or follow the apodosis. The apodosis which follows the protasis tends to be marked as a result clause by *hɔ^L* ‘that’.

(205) APODOSIS PROTASIS
ní:LH ba^{Ma} son^L kí^H ké^{Me}
 go^{1s} AFF^{1s} if pay^{12s} of^{1s}
 I will go if you will pay my way.

(206) PROTASIS APODOSIS
son^L ka^L-lí^{PMi} ta^{LH} hɔ^L bá^{ʔH} ní:LHi
 if PST-get^{C1s} work that AFF go^{1s}
 If I get work, then I will go.

The conjunction *huín^H* ‘if’ introduces a hypothetical condition which often implies a future realization. The apodosis clause is a result clause marked by the inanimate anaphoric deictic plus affirmation modal.

- (207) PROTASIS APODOSIS
huín^H guó^{H?} za^{L?}ó^L hq^L bá^{?H} ní:^{LHi}
 if go[^]12s tomorrow that AFF go[^]11s
 If you go tomorrow, then I will go.
- (208) APODOSIS PROTASIS
za^{L?}ó^L ní:^{LHi} huín^H ?nán^{Mr} hnä^{LH}
 tomorrow go[^]11s if need[^]13 1s
 Tomorrow I will go if they need me.
- (209) PROTASIS
huín^H gí:^M ?án^{LM} to:^L
 if hot[^]s3 very oven
- APODOSIS
hq^L bá^{?H} zán^{?LH} ni^L-zí^{?L} ?i^Lñí^{?H}
 that AFF dangerous IMPF-raw[^]13 bread
 If the oven is really hot, then the bread will likely not get cooked inside.
- (210) PROTASIS APODOSIS
huín^H ka^L-gé^{Mna?} ni^Lkuí^{?H}, ?án^{LMb} hlo^{?H} hné:^{nM}
 if PST-arrive[^]C1p Oaxaca very[^]AFF pretty[^]s3 appears
 When you arrive in Oaxaca, it is very beautiful.

A contrary-to-fact condition is formed by the use of the irrealis conjunction introducing a past-tense protasis with an imperfect apodosis either preceding or following. The irrealis conjunction may occur with a variety of other adverbs and has a combining form *hua^L-* and a full form *huá^{?H}*.

- (211) APODOSIS PROTASIS
la^L-mí^{LH}-síl^{?i^H} ní:^{LHi} hua^L-kó^{?L} ha^L-ka^L-tü:^L hmí^{LM}
 PST[^]IMPFF-plan[^]s3 go[^]11s IRR-for NEG-PST-pour[^]C3 rain
 I had planned to go to Oaxaca if it had not rained.

A conditional sentence may also be formed by use of the interrogative manner adverb combined with the irrealis conjunction. If the apodosis precedes the protasis, it is introduced by the adversative conjunction.

- (212) PROTASIS APODOSIS
hial^Lhuá^{?H} tɔ:^L hmí^{LM} za^L?ó^L, ziu^{?H} ní:^{LH} ba^{Ma}
 HOW-IRR pour^{^P3} rain tomorrow but go^{^I1s} AFF^{^1s}
 Even if it rains tomorrow, nevertheless I will go.

- (213) APODOSIS PROTASIS
zé^H ba^La[?] za^L?ó^L hial^L-huá^{?H} tɔ:^L hmí^{LM}
 go^{^I1p} AFF^{^1p} tomorrow HOW-IRR pour^{^P3} rain
 We will go tomorrow even if it rains.

3.11. Temporal sequence. The deictic word *hɔ^L* ‘that’ was introduced above as marking a result clause. When it occurs with one or more modal adverbs postposed—as in *hɔ^L bá^{?H}* (affirmation), *hɔ^L gí^H* (augmentation), *hɔ^L gí^H bá^{?H}*, or *hɔ^L bí^L* (continuation)—it may introduce a clause to indicate that it names an activity or process which occurs in temporal sequence following that named by the preceding clause.

- (214) FIRST SECOND
mi^{LH}-ka^L-tí^L la^L-ʔi:^M kɔ:^L hɔ^L gí^H bá^{?H} ka^L-tó^{?LM}
 when-PST-reach^{^C3} PST-ring one that AUG AFF PST-finish
 At one o'clock, then it finished.

- (215) FIRST SECOND THIRD
ge^{?M} kɔ:^L bē^{?LH} hɔ^L ka^L-hnin^{?LHna?} hɔ^L ka^L-hɛ^{LMɾ}
 arrive^{^C3} one truck that PST-impede^{^C1p} that PST-stop^{^C3}
 A truck arrived and we stopped it and it stopped.

There is no structural difference between the marking of two clauses in temporal sequence by *hɔ^L*, and a sequence in which the second clause is a result of the situation named by the first clause.

- (216) GROUND RESULT
zín^{?M} guí:^M hɔ^L bá^{?H} ní^L-du^{?LHu} ka^Lhué^{LH}
 very cold that AFF IMPF-drink^{^I1s} coffee
 It is very cold so I will drink coffee.

A temporal sequence in which the subsequent situation is not anticipated from the first one may be linked by the adversative conjunction *ziú^{?H}* ‘but’.

- (217) FIRST SECOND
si^L?i^H ni^L-tiú^L hmí^{LM} ziu^{?H} ha^L-ka^L-tɯ^{:L}
 plan[^]s3 IMPF-pour[^]I3 rain but NEG-PST-pour[^]C3
 It was going to rain but it didn't.

3.12. Comparison. A simile is formed by placing a clause in the manner position of a matrix clause, with the adverb phrase *la^L-kó^{?L}* 'as for' as manner complementizer of the clause of comparison.

- (218) P O MA|MA P S J
ha^L-ni^L-mó^{H?} ?i^Lui^{?LM} la^L-kó^{?L} ka^L-mó^M hnä^{LH}
 NEG-IMPF-see[^]I2s suffer[^]S3 thus-for PST-see[^]C1s 1s
 You will not suffer like I suffered.

A contrary-to-fact simile is formed by the adverb of manner and the irrealis conjunction *huá^{?H}* as manner complementizer of the clause of comparison.

- (219) S P MA|MA P S J
?i^L hiú:n^{LH} na^L -b zé^M la^L-huá^{?H} ŋó^{LM} hnä^{LH}
 REL child that AFF go[^]I3 thus-IRR go[^]P1s 1s
 That child is going as if I were going.

3.13 Topicalization

It is not possible in this study to make a comprehensive statement about the use of topicalization, except to briefly describe the basic method by which it is expressed in Comaltepec Chinantec, namely, a constituent is moved from its normal location within a clause to the left-most position. When this left dislocation occurs, the modal adverb *bá^{?H}* (affirmation), either in its phonologically full or enclitic form *-b*, may be postposed to the topicalized constituent. Any clause may contain more than one constituent made prominent by the affirmation modal, but the full form of the modal never occurs except in this left dislocation position.

When the predicate is topicalized, the affirmative modal is added to the verb stem either in its reduced or full form. The reduced form of the subject pronoun, if present, occurs postposed to the modal.

- (220) P MODAL S MA
kaL-ŋán?M báM -a tá?MhiuLH
 PST-go home[^]C1 AFF^{1s} 1s slowly
 I went home very slowly.
- (221) P MODAL S O L
kaL-sí:nL -b zǎL kǎn?LH kéM hnǎLH huiLM ?esLkuǎ:lLH
 PST-send[^]C3 AFF person big[^]PL of[^]1s 1s road school
 My parents did send me to school.

An element may be made prominent without being topicalized by left dislocation. This prominence is achieved by postposing the enclitic form of the affirmation modal—never the full form. More than one constituent of the same clause may be made prominent in this way, and a topicalized form (left dislocated) may also have this form.

- (222) P S MA|P S|H MODAL P O|
niL-hméM -r laL-tiLM háM zǐLM -b -re
 IMPF-do[^]I3 3 thus-reach[^]P3 come heart[^]3 AFF 3

 two teacher AFF REL PST-create[^]C₃
It was two teachers who created (it).
- (234) P MODAL S
ʔi^L mü^{ʔL} dóm^M -b -in^ʔ ka^L-hmí^Lgé:n^{HL} hnä^{LH}
 REL snake that AFF REL PST-deceive[^]C₃ 1_s
It was that snake which deceived me.
- (235) P MODAL S
hui^{LM} mó^{ʔL} kuo^{ʔL} -b li^{LH}. ka^L-hún^{Mr}
 road mountain bald AFF where PST-die[^]C₃
It was Bald Mountain where he died.

³-*in^ʔ* is the enclitic form of the animate relative word *ʔi^L*, which has undergone the same phonological reduction as is described in footnote 1 of §5 for the third-person personal pronoun. Indeed, this form of the personal pronoun would appear to have its source in the relative pronoun.

4

The Comaltepec Chinantec Noun Phrase

A Comaltepec Chinantec noun phrase has five constituents—quantifier, head, modifier, possessor, and deictic, which occur in that order—the quantifier, modifier, and the linguistic deictic word agreeing in gender with the noun head. All five constituents may, theoretically, be present within any particular phrase; but it is much more common for no more than two or three to be present, and any of the five may stand alone to constitute a noun phrase. It is common, on the other hand, for the modifier to be repeated APPositionally one or more times at the end of the phrase.

- (236) P S O|Q H M]
ka^L-h̃ɨn^{?LM} -*ne[?]* *ha^{:n^L}* *zi^{:L}* *ʔɨ^{?LH}*
 PST-meet[^]C3 animal one dog fat
 The animal met a fat dog.

- (237) P S|H PO] O L
ka^L-sí^{:n^L} *ni^L-i^{ún}?LM* *ké^{Me}* *hnä^{?H}* *huⁱ?LM* *he^L-nu^{:HL}*
 PST-send[^]C3 grandmother of[^]1s 1x road ranch
 My grandmother sent us (excl) to the ranch.

4.1. The noun head. Most nouns are simple lexemes, and are not in any way inflected, with the exception of inalienable nouns which are inflected for person-of-possessor. Typical nouns are listed in (238).

(238)	<i>kuä^{LH}</i>	horse	<i>ŋi:^L</i>	grass
	<i>ta^{PLM}</i>	honey bee	<i>ŋi^{LM}</i>	pig
	<i>li^H</i>	flower	<i>hú:^H</i>	word, opossum
	<i>ŋi^{LM}</i>	thread	<i>zä^L</i>	person
	<i>ŋi^{LH}</i>	salt	<i>hi^L</i>	book
	<i>ŋi^{PLM}</i>	moss	<i>hi^{PL}</i>	orange, wasp

Idioms formed of two noun roots do occur, however, in which the first is generic and the second specific. Sometimes the first indicates a characteristic of the second. Often one cannot identify the parts of such an idiom. Some of those which have been distinguished follow. Within the noun phrase, they are treated as forming complex noun-phrase heads.

(239)	<i>lo:^L</i>	+	<i>gui^{LH}</i> ,	skin	+	head	→	<i>loLgui^{HM}</i> ,	hat
	<i>ʔma^L</i>	+	<i>ʔu^{LH}</i> ,	wood	+	cane	→	<i>ʔmaLʔu^{HM}</i> ,	cane
	<i>kuä^{LH}</i>	+	<i>nu:^L</i> ,	horse	+	wild	→	<i>kuä^Lnu:^{HL}</i> ,	deer
	<i>kue^{PLH}</i>	+	<i>ʔi^{PL}</i> ,	dipper	+	measure	→	<i>kue^Lʔi^{PHL}</i> ,	scale
	<i>te^{PLH}</i>	+	<i>gua^{LH}</i> ,	be in	+	handle	→	<i>teLgua^{HM}</i> ,	earring
	<i>mó:^L</i>	+	<i>tu^L</i> ,	bone	+	chicken	→	<i>mo^Ltu^{HL}</i> ,	egg
	<i>zä^L</i>	+	<i>ŋiu^{PL}</i> ,	person	+	male	→	<i>zä^Lŋiu^{PL}</i> ,	man
	<i>mí^{PH}</i>	+	<i>tiú^{LM}</i> ,	seed	+	rifle	→	<i>mí^Ltiú^{LM}</i> ,	bullet
	<i>má^{PH}</i>	+	<i>hi^L</i> ,	leaf	+	book	→	<i>ma^Lhi^L</i> ,	paper
	<i>iú^{LM}</i>	+	<i>hua^{PLM}</i>	expert	+	doctrine	→	<i>tu^Lhua^{PLM}</i> ,	teacher
	<i>hú:^H</i>	+	<i>ŋi^{PM}</i> ,	word	+	Spaniard	→	<i>hu^Lŋi^{PM}</i> ,	Spanish

Noun gender. As mentioned in §2.15, every noun in Comaltepec is either animate or inanimate, without their being an overt morphological marker of gender on the noun itself. The quantifier, modifier, and linguistic deictic word, on the other hand, are inflected for the gender of the noun they modify, nasalization or final nasal consonant often being the inflectional feature which marks animacy in such words, but not always. The possessor of a noun, or a spatial deictic word are not inflected for the gender of the noun they accompany. The two noun phrases of (240) and (241) illustrate gender agreement in the Comaltepec noun phrase.

- (241) O H M PO D
ʔi^L hi^{ʔL} ná:n^M ké^{Me} dó^M
 REL wasp yellow of[^]1s that
 that yellow wasp of mine

Gender can be rhetorically upgraded to express a closer association than the normal gender assignment would indicate, or it can be downgraded to express a more distant association. The nouns ‘paper’ and ‘corn’ in the following clauses are normally inanimate. In (242) and (243), the quantifier of the first is animate and the verb of the second clause is transitive animate to upgrade these nouns, assigning them a more intimate status than would otherwise be the case. These ‘papers’ and this ‘corn’ are, in this way, viewed as products of someone’s personal labor and attention.

- (242) P S O[Q H]
mi^{LM} -r hmi^Lgiú:n^L -b hiu^{LH} ma^Lhi^L
 request[^]P3 3 many[^]ANIM AFF DIM paper
 S/he asks for many papers.

- (243) P S O
ni^L-ʔuén^{ʔM} -r mi^Lkuí:^H
 IMPF-REMOVE[^]TAI3p 3 CORN
 She will take out her corn.

The various elements of a noun phrase are not syntactically dependent upon one another. Any constituents may be absent from the noun phrase, including the noun head, and any remaining constituents may stand alone or in combination to constitute a normal noun phrase. It is common for the relative word to occupy the head of a noun phrase in the absence of a true noun, but this is not required, other than with a deictic word.

- (244) P S[Q H]
ni^L-hiún^{ʔL} gán^M ʔlé:^M
 IMPF-fall[^]I3p two soldier
 Two soldiers fell.

- (245) P S

 I have one.

(248) P O[Q D]
hé:^Mna[?] *ʔe^L* *hq^L*
 look[^]p1 REL that
 We are looking at that.

4.2. Quantifiers. Quantifiers are either numerals or other quantifying expressions, including measure phrases. They agree with the head noun in gender. Nouns are either count nouns to which numerals may be added directly, or mass nouns which require a measure phrase to indicate number. A few numerals are illustrated below, but the rules by which numerals are formed are beyond the scope of this study.

(249) Q H
gán^L *hó[?]L*
 two animal
 two animals

(250) Q H
gi^L-tɥ^{LM} *hi^L*
 ten-two book
 twelve books

(251) Q H
hɣiú:^M *ʔmá^L* *mi^Lku:[?]H*
 six measure corn
 six measures of corn

- (252) Q H
 ?ni^{LM} má^{?H} ma^{Lhi^L}
 three leaf paper
 three pieces of paper

Measure phrases are a special kind of noun phrase which contain only two elements, a quantifier and a measure word as head. There are only a few measure words in Comaltepec Chinantec, some of which are listed in (253). Some nouns, such as the first three listed in (253), are *classifier nouns* in that, although they name ordinary tangible objects, they may also function as standards of measurement.

- (253) má^{?H} ‘leaf’ for measuring paper,
 ziu:^M ‘jug’ for measuring liquids,
 mí^{?H} ‘seed’ for measuring small round objects,
 hman^{?LH} ‘measure’ for measuring land,
 mìn^{?LH} ‘measure’ for measuring people or animals,
 ?má^L ‘measure’ for measuring corn, and
 ?í^{?L} ‘measure’ for measuring money, weight, or time.

- (254) ka^L-?uë:^L tî^M ?ni^{LM} mí^{?H} ma^{Lhã^{LHr}}
 PST-take out[^]C3p two three seed teeth[^]3
 Two or three of his teeth came out.

- (255) kìn^{LM} tî^M ?í^{?L} ku:^M
 cost[^]s3 two measure money
 It costs two pesos.

- (256) tî^M ?í^{?L} -b kìn^{LM} ?e^L na^L

zé^{LM}na[?] gó^Mna[?] ta^{LH} kuä^Lnu:HL
 go^{1p} two^{1p} work deer
 We are going, the two of us, deer hunting.

The numeral 'one' may function, in the quantifier position, as an indefinite article. The relative word, on the other hand, functions in the quantifier position to lend definiteness to the anaphoric reference of a noun phrase, in lieu of Chinantec having a definite article. Both the numeral and the relative word must agree with the noun in gender.

- (264) P O|Q H M|COMP P S | D
ni^L-kuĕ^{Mr} ?e^L ma^Lhi^L ?e^L si:^L pasaporte dó^M
 FUT-give¹³ REL paper REL name³ passport that

- (265) P S[Q H]
ka^L-li^L-se:n^L *ha:n^L* *hó^{PL}*
 PST-ACT[^]C-exist[^]3 one animal
 An animal was born.

Inasmuch as a noun is not itself inflected or marked in any way for plural, Comaltepec Chinantec has a plural word which functions as a quantifier within the noun phrase. It agrees with the noun in gender.

- (266) *ha^L-lé^{PL}* *hi^L*
 PL book
 books

- (267) *ha^L-lén^{PL}* *kuä^{LH}*
 PL horse
 horses

Count and mass nouns. Comaltepec Chinantec nouns may be classified as count nouns or mass nouns on the basis of the way they may be quantified. Those which may be quantified directly by a numeral are count nouns; those which require a measure phrase to be quantified are mass nouns. The first example of (268) illustrates a count noun, the second example illustrates a mass noun with its measure phrase.

- (268) *gé^M hi^{PL}*, seven orange, seven oranges
i^q^M má^{PL} ma^Lhi^L, two leaf paper, two sheets of paper

4.3. The descriptive modifier. The modifier in Comaltepec Chinantec may always be considered a relative clause, the structure of which is discussed in detail in §6. The relative clause modifier normally occurs immediately following the noun head and usually begins with the relative word. As is generally true of all noun phrase constituents, a relative clause may occur in the absence of other of the constituents, even of the head noun itself. Examples of relative clauses are presented in (269) and (270), but further discussion of their structure is reserved for §6.

- (269) P S[Q H M]
ní^H-sí^L-ní^{PHM} *kó:^L* *?mí^{PLM}* *i^q:^M*
 PRF-STA-stretch[^]3 one cloth red
 A red cloth was already stretched out.

- (270) P S[Q H M[COMP P]]
hia^LH si:^L ha^Llé?L gua^L ?e^L la^Lni:n^M
 how? name³ PL river REL important
 What are the names of the important rivers?

4.4. Possessor. The possessor constituent takes one of two forms, depending upon whether the possessed noun is alienable or inalienable. An inalienable noun is inflected internally for person-of-possessor and is obligatorily followed by a possessor constituent. The possessor of an inalienable noun is a pronoun or noun phrase, directly postposed to the noun.

- (271) P S [Q|H PO]
ni^L-kué^M -r ?i:^L -na?
 IMPF-give¹³ 3 tortilla^{1p} 1p
 S/he will give our tortillas.

- (272) P S[H PO]
ka^L-ho:^L tí:^M kuä^LH
 PST-break^{c3} foot³ horse
 The horse's foot broke.

Inalienable nouns primarily include those which name body parts, kinship relationships, or common household items. A few typical ones are listed in (273), one of which is further illustrated in (274).

- | | | | |
|-------|---|---------------------------|-----------------------|
| (273) | <i>guo:^L zä^L</i> | hand ³ man | man's hand(s) |
| | <i>ni^LH hú:^H</i> | face ³ opossum | opossum's face(s) |
| | <i>tí:^Mi</i> | foot ^{1s} | my foot/feet |
| | <i>?i:^Lna?</i> | tortilla ^{1p} | our tortilla(s) |
| | <i>ta^L?i?^LMr</i> | nose ³ | his/her/their nose(s) |
| | <i>rún?^L</i> | relative ^{2s} | your relative(s) |
| | <i>mo^Lko?^LH ná?^L</i> | back ^{2p} | your (pl) backs |
| | <i>ni^Lkú^LMr?</i> | tail ^{animal} | its/their tail(s) |

- | | | | |
|-------|---------------------------------------|------------------------|-----------------------|
| (274) | <i>ni^Mi</i> | face ^{1s} | my face |
| | <i>ni^Lna?</i> | face ^{1p} | our faces |
| | <i>ni^Mi?</i> | face ^{1p} | our faces |
| | <i>ni^H?</i> | face ^{2s} | your face(s) |
| | <i>ni^H ná?^L</i> | face ^{2p} | your (pl) faces |
| | <i>ni^LMr</i> | face ³ | his/her/their face(s) |
| | <i>ni^LHre?</i> | face ^{animal} | its/their face(s) |

With inalienable possession, where the inflected noun must be followed immediately by the possessor constituent, a modifier constituent, if present, must follow the head and possessor rather than intervene between the head and possessor within the same phrase.

- (275) P O|P ACC|P O|H PO M|COM P S } D } | |

 I gave the dogs my moldy tortillas.

An alienable noun does not require a possessor but may optionally occur with one. In this context, however, the possessor must be introduced by the allocational noun 'of', which is itself an inalienable noun whose possessor names, in effect, the possessor of the alienable noun which precedes it. The allocational noun 'of' is the Chinantec answer to the genitive.

- (277) P S|H PO | O

hiL *kiáʔMr* book of³ his/her/their book(s)
nu:L *kiá:Mreʔ* hay of¹animal its/their hay

Both full and enclitic forms of pronouns occur with the allocational noun, as in any other context where a pronoun may occur. Pronouns are presented in greater detail in §5; but note that in (280), pronouns are seen to distinguish a further gender category, dividing ANIMATE into HUMAN versus ANIMAL for third-person reference.

(280)	With enclitic pronoun	With full pronoun
	1s <i>kéMe</i>	1s <i>kéM hnäLH</i>
	1p <i>kiMi?</i>	1x <i>kiM hnä?H</i>
	1p <i>kiMna?</i>	1i <i>kiM hnä:LHa?</i>
	2s <i>ki:M?</i>	2s <i>ki:M ?niuL</i>
		2p <i>ki:M ?niu?L</i>
		2p <i>ki:M ná?L</i>
	3 <i>kiá?Mr</i>	3 <i>kiá?M ?írL</i>
	An <i>kiá?Mre?</i>	An <i>kiá?M ?iLre?</i>
	An <i>kiá:Mre?</i>	

Nouns for body parts and kinship relationships are generally inalienable in all contexts. Nouns which name certain household items may have an alienable form, when spoken of in less intimate contexts, as well as an inalienable form to indicate a more intimate relationship between possessor and possessed. The following words have both uninflected alienable forms and inflected inalienable forms.

(281)	gloss	free	1s	1p	2s	3
	blood	<i>hmiLM</i>	<i>hmü</i>	<i>hmiLi?</i>	<i>hmiH?</i>	<i>hmiLHr</i>
	petate	<i>hmo:L</i>	<i>hmó:Lo</i>	<i>hmó:LHo?</i>	<i>hmoLH?</i>	<i>hmo:Mr</i>
	metate	<i>tó:L</i>	<i>tó:Lo</i>	<i>tóLMO?</i>	<i>tó:M?</i>	<i>tóHr</i>
	net	<i>no?LH</i>	<i>nó?Lo</i>	<i>nó?Lo?</i>	<i>nó?L</i>	<i>no?Hr</i>

(282)	<i>hmó:Lo</i>	or	<i>hmo:L</i>	<i>kéMe</i>	my petate(s)
	<i>kuüLMi?</i>	or	<i>kuü:LH</i>	<i>kiMna?</i>	our firewood
	<i>kuüLMna?</i>	or	<i>kuü:LH</i>	<i>kiMi?</i>	our firewood
	<i>?niuH?</i>	or	<i>?niuLM</i>	<i>ki:M?</i>	your house(s)
	<i>hmi:LH ná?L</i>	or	<i>hmi:L</i>	<i>ki:M ná?L</i>	your (pl) water
	<i>zi:LHr</i>	or	<i>zi:L</i>	<i>kiá?Mr</i>	his/her/their dog(s)
	<i>?mi:Mre?</i>	or	<i>?mi:L</i>	<i>kiá:Mre?</i>	its/their (animal) feces

As indicated, there are two factors which distinguish alienable and inalienable nouns. Inalienable nouns are always possessed; alienable nouns are only optionally so. Inalienable nouns occur directly with possessor

constituent following; alienable nouns require the allocational noun. There is a final, very small set of nouns which crosses these distinctions—they are inalienable in the sense that they always occur possessed, but the possessor constituent occurs with the allocational noun.

- (283) *niLiúnʔLM kí:Mʔ,* grandmother of², your grandmother(s)
tiL kéHe, father of^{1s}, my father

4.5. Deictic words. A deictic, when present, is the last element of the noun phrase.

- (284) P S|Q H D]
kaL-ténʔL ʔiL hóʔL dóM
 PST-fall^{C3} REL animal that
 That animal fell.

There are two sets of deictic words, spatial and linguistic. Three spatial deictics point to increasing degrees of distance from the speaker: *laL* ‘this (near the speaker)’, *naL* ‘that (near the addressee)’, and *dóM* ‘there (near neither speaker nor addressee)’.

- (285) P O|Q H D]
kaL-hméMe ʔeL mapa laL
 PST-make^{C1s} REL map this
 I made this map.

- (286) P L|H PO D]
zi:nMneʔ iúʔH ʔmaL naL
 be^{up}^{P3} up tree that
 It (animal) is up in that tree.

- (287) MA P O|Q H D]
hloʔH -b siLiínLMneʔ ʔeL kuiʔLH dóM
 lovely-AFF gather^{P3} REL piece that
 It was lovely the way the animal picked up those pieces.

Two linguistic deictic words distinguish the gender of referents in the linguistic context, usually anaphorically, but occasionally kataphorically to a referent to be introduced in the immediate following context: *hɔL* ‘that (inanimate)’ and *ʔiL* ‘that (animate)’. The inanimate member of this set

has a wide range of uses outside the noun phrase, as in the second sentence below, where it functions as a clause conjunction.

- (288) P S O[H PO[H PO[Q H D]]]
ho^L-ka^L-hmê^M *gî^H* -i *examen* *kiá^{PM}* *pe^L* *si^{PL}* *hq^L*
 TRM-PST-make^{CI} AUG 1_s test Of³ REL month that
 I no longer had to take the test that particular month.

- (289) S[Q H D] P S O
?i^L *zã^L* *?i^L* *lín^{LM}* -r *tu^Lhua^{PLM}*
 REL person that BE^{P3} 3 teacher
 That person is a teacher.

Closely related to the use of these anaphoric deictic words is the use of the relative word as quantifier, as seen in (285)–(289), when the reference is definite.

Like all other noun phrase constituents, a deictic word can stand alone in the place of a noun phrase when the noun head is absent.

- (290) P S MA
tí^{LM} *hiu^{LH}* *?i^L* *la^L-tí^{LM}* *tu^L-?ié:^{LH}*
 reach^{P3} DIM 3 thus-reach^{P3} fowl-female

 That is very narrow.

Adverbial deixis is accomplished by postposing any of the deictic words to the manner deictic adverb *la^L-* (§3.3).

- (297) T MA MA P
hɔ^L bá?H tá?M hiu^{LH} la^L-dɔ^M ka^L-hɨ?LMr
 that AFF group DIM like-that PST-turn[^]C3
 So they turned it very slowly like that.

The order of elements in a noun phrase may appear to vary superficially, as in (298) and (299), where the deictic appears to precede the possessor within the noun phrase; but these may be accounted for as noun phrases embedded as head of a larger noun phrase. In the first sentence the subject is the noun phrase ‘that paper’ to which further adjuncts marking plural and possessor are added. In the second sentence the locative is the prepositional noun phrase ‘on that paper’ to which the definite article (relative word) and possessor are added as adjuncts.

- (298) P MA S[Q H[Q H D] PO]
ni^H-né^{LM} giú^M ha^Llé^{PL} ?e^L ma^Lhi^L hɔ^L kí:^M?
 PRF-lie[^]s_{3p} well PL REL paper that of[^]_{2s}

ni^L-tɔ^M ?e^L ni^{LH} ma^Lhi^L dó^M kí:^M?
 IMPF-stick[^] I₃ REL face paper that your[^]_{2s}
 It will stick on that paper of yours.

4.6. Locative nouns. There are spatial and temporal nouns which have a more limited distribution than other nouns. They often occupy locative positions in a clause, not participating in nonlocative noun phrases with the same frequency as other nouns. References to times or places are more usually made by locative constituents than by primary nominal constituents.

- (300) T P S
hó^M ka^L-gui^Llí:^{nM} ɲú^{nM} sí^Lmin^{PL}
 day[^]before[^]yesterday PST-arrive[^]c_{3p} nine young[^]man
 Nine young men arrived day before yesterday.

- (301) P L T
zé^Me? hui^{LM} mó^{PL} ka^L?ló:^M
 go[^] I_{1p} road mountain afternoon
 We will go to the mountain this afternoon.

A second type of locative noun which carries a heavy syntactic load is *hui^{LM}* 'road'. It may occur as the head of a locative noun phrase, not only with verbs of motion or position, but any time a locative element is present. It is often used in conjunction with a prepositional noun.

- (302) P S L[H PO]
se:^{nL} ha:^{nL} ló:^{LH} hui^{LM} tí:^M ?ma^L dó^M
 exist[^]s₃ one rabbit road foot tree that
 There is a rabbit at the foot of that tree.

- (303) L[H PO] P O
 hui^LLM *ni^{LH}-?niú^{LM}* *ni^L-bá^La* *mí^{?H}* *ka^L-hué^{LH}*

- (304) P L[H PO]
 ka^L-?e^{LMr} *hui^LLM* *zi^{LM}* *salon*
 PST-teach^{c3} road heart³ classroom
 He taught inside the classroom.

A third type of locative noun which is significant to mention is the PREPOSITIONAL NOUN. A number of inalienable nouns may function like prepositions in that they introduce noun phrases which have adverbial force. Syntactically they are noun and possessor; functionally they are like preposition and object-of-preposition. Some of these nouns name body parts; others do not. An example is given in (305), but see §9 (prepositions) for a more complete treatment.

- (305) P L[H PO]
 gia^{Ma} *ni^{LH}* *mes^{LH}*
 put^{1P1S} face³ table
 I put them on top of the table.

4.7. Names and other vocative nouns. Personal names are of Spanish origin, usually based on the stressed syllable of the corresponding Spanish name. A few vocative nouns are based on kinship terminology which may include some extended meanings. Although nicknames are common when referring to individuals, they are not generally used vocatively. The vocative constituent is discussed in §3.6. Some examples of vocative nouns are illustrated in (306).

- (306) *tá^{:LH}* Dad *íj^{:H}* Juventino, Christina
 ná^{:LH} Mother *rí^{?H}* Ricardo, Enrique
 hí^H Virginia *mí^H* little girl
 hiú^{:nLH} kid *ciún^{?H}* little boy
 hó^H George

5

Comaltepec Chinantec Pronouns

5.1. Personal pronouns. Personal pronouns distinguish seven categories of person-number-gender. Whereas verb inflection distinguishes first-singular from first-plural, personal pronouns further divide first-plural into two categories—first-person inclusive, which includes one or more addressees with the speaker, and first-person exclusive, which includes any number of third persons with the speaker but excludes all addressees. Personal pronouns further distinguish singular and plural second-persons and two third-person categories, with separate pronouns for third-person human and third-person animal. Neither of these last two dichotomies are normally made in verb inflection, apart from the suppletive verbs which distinguish singular and plural number in all persons.

- (307) *hnä^{LH}* (first-person singular)
hnä^{?H} (first-person exclusive)
hná:^{LHa?} (first-person inclusive)
?niu^L (second-person singular)
?niú^{?L} (second-person plural)
?ír^L (third-person human)
?i^Lré^{?L} (third-person animal)

In addition to the phonologically full forms of the seven pronouns listed above, there are alternate forms for six of them which express less prominence than the full forms, only the inclusive-exclusive distinction being absent in the less prominent forms.

(308)	<i>-R</i>	(first-person singular)
	<i>-Rʔ/-naʔ</i>	(first-person plural)
	<i>-ʔ</i>	(second-person singular)
	<i>náʔL</i>	(second-person plural)
	<i>-r/-inʔ</i>	(third-person human)
	<i>-reʔ/-neʔ</i>	(third-person animal)

Five of these forms are enclitic, only one being a fully-stressed phonological word.¹ Three of the pronouns have two enclitic forms without any difference in meaning. The third-person human pronoun is here written as *-r* or *-inʔ*.² The form *-Rʔ* (1p) never occurs after stems with postvocalic /n/, while *-naʔ* (1p) may occur after a stem of any form. The form *-neʔ* of the animal pronoun only follows stems with postvocalic /n/; otherwise *-reʔ* occurs.

Note that this represents a shift in interpretation from earlier work. When these pronouns were first studied in depth in the Spring of 1974, the second plural pronoun was considered to have two competing full forms for which no distinct syntactic function had at that time been discerned. The phonological characteristics of pronouns are described in some detail in Anderson, Martínez, and Pace (forthcoming), but briefly the

¹An alternative phonological interpretation would be to consider the less prominent form of the second-plural pronoun as enclitic *-naʔ*, and the second enclitic form of the first-person plural pronoun in (308) as *-na:ʔ*. This interpretation, however, leads to the anomaly that *-na:ʔ* would be the only known unstressed syllable in the language having a long vowel. It seems better to recognize the second-plural pronoun as being a normal, stressed syllable in spite of its being phonologically different from its fellow less-prominent pronoun forms than to interpret the less-prominent set as all enclitic but have one of them phonologically unique within the language as a whole. In spite of its not being interpreted here as enclitic, this second-person pronoun is considered to have all of the syntactic characteristics of the truly enclitic forms. Note that this represents a shift in interpretation from earlier work. When these pronouns were first studied in depth in the Spring of 1974, the second plural pronoun was considered to have two competing full forms for which no distinct syntactic function had at that time been discerned.

²Anderson, Martínez, and Pace (forthcoming), which was drafted around 1973, does not give a complete statement concerning the phonological realizations of the enclitic forms of the third-person pronoun. In this study, it is written as *-r* and as *-inʔ* as a partial aid to the reader who may have the opportunity to hear Chinantec spoken, even though these two forms are predictable by rule and do not exhaust the full range of phonological realizations. Briefly, the enclitic form of this pronoun is *-inʔ* when it is the second of two third-person pronouns occurring together after a verb, or when it is the only pronoun following a stem with postvocalic /n/. In this last context, the postvocalic /n/ of the stem, and any glottal closure of the stem are elided. The enclitic

symbol *R* is used to stand for a phonological chameleon which takes the form of a preceding vowel or alveolar nasal /n/. In this study, the resulting vowel or nasal consonant is written in all examples, rather than using the more abstract symbol *R*.

- (309) *mi^M -i kq:^L hi^L*
 ask[^]P1s 1s one book
 I ask for a book.
- (310) *ka^L-kú[?]L -u ?o^Lhuí:^L*

- (316) *ŋó^M -o[?] hui^{LM} lî^{LH} zí:n^M -ne[?]*
 go[^]c1p 1p road where BE[^]UP[^]P3 animal
 We went to the place where the animal was.

form is *-re* following a stem with postvocalic /n/ when a first-person or second-person pronoun (in enclitic form) or a modal adverb in enclitic form intervenes. It is *-ne* following a stem with postvocalic /n/ when preceding a second third-person enclitic pronoun (which is to say, preceding *-in[?]*). In all other contexts it is *-r*, which is a voiceless retroflexed fricative.

A personal pronoun may occupy any position in which a noun or noun phrase may occur, the free pronouns occurring without restriction, but the enclitic forms (and *náʔL*) occurring only in neutral, nontopicalized postpositions. When a noun phrase or a full pronoun occupies a primary nominal position and is topicalized as the left-most position of its clause, it occurs in apposition with an enclitic form of the pronoun in its neutral postposition. When a noun phrase or full pronoun occupies that same neutral position, however, the enclitic form of the pronoun does not occur. The following three sentences show relative prominence of the first-person singular pronoun as subject, from greater to lesser. In (317), the full form of the pronoun occurs in topicalized position preceding the verb and the enclitic form follows the verb in neutral position; in (318), the full form of the pronoun occurs in neutral, postverb position; and in (319), the enclitic form occurs in postverb position.

(317) s P S L T
hnä^{LH} ní:LH -i hui^{LM} he^{Lnu:HL} za^{LʔóL}
 1s go^ʔ1s 1s road ranch tomorrow
 I will go to the ranch tomorrow.

(318) P S L T
ní:LH hnä^{LH} hui^{LM} he^{Lnu:HL} za^{LʔóL}

(319) P S L T
ní:LH -i hui^{LM} he^{Lnu:HL} za^{LʔóL}
 go^ʔ1s 1s road ranch tomorrow
 I will go to the ranch tomorrow.

Note the following sentences which show that the shorter second-person-plural form *náʔL* functions like the enclitic forms of other pronouns. In (320), it occurs in the neutral postverb position; in (321), it functions as subject of a main clause in neutral position with the enclitic form of the third-person pronoun as object postposed and phonological attached to it; and in (322), the other full form of this same pronoun *?niúʔHL* (second-person plural) occurs in topicalized, preverb position while *náʔL* occurs following the verb as the enclitic form of any other pronoun would. This shorter, albeit stressed, form of the second plural pronoun may not occur in preverb position in these (or any other) sentences.

- (320) T P S L
mī^{LH}-gi^M ꞑie^L ni^L-ꞑi^L-lé^{ꞑM} ná^{ꞑL} hui^{LM} ké^{Me}

 2p-AFF carry^{^l2} 2p PL book
 You all are the ones who carry the books.

To distinguish between first-person inclusive and first-person exclusive, only full forms of pronouns can be used. When one or the other of these full pronouns is topicalized to a position preceding the predicate, either of the enclitic forms of first plural may be postposed to the verb stem, within the phonological limitations already mentioned.

- (323) *hná^{:LHaꞑ} zé^H -e^ꞑ za^Lꞑó^L*
 ii go^{^11ꞑ} 1p tomorrow
 We (incl) are going tomorrow.
- (324) *hná^{:LHaꞑ} zé^H -na^ꞑ za^Lꞑó^L*
 ii go^{^11ꞑ} 1p tomorrow
 We (incl) are going tomorrow.
- (325) *hnä^{ꞑH} zé^H -e^ꞑ za^Lꞑó^L*
 1x go^{^11ꞑ} 1p tomorrow
 We (excl) are going tomorrow.
- (326) *hnä^{ꞑH} zé^H -na^ꞑ za^Lꞑó^L*
 1x go^{^11ꞑ} 1p tomorrow
 We (excl) are going tomorrow.

Full forms of pronouns are not generally restricted in their syntactic occurrence—they may occur in any nominal position whether topicalized or not—but enclitic forms may neither occur preceding a verb in

topicalized position nor as direct objects whether topicalized or not, with the exception that third-person enclitic forms may occur as objects. The *náʔL* form of second plural also shares this latter restriction with nonthird-person enclitic forms—it never occurs as a direct object.

The following examples illustrate enclitic pronouns. (327)–(332) illustrate first-person enclitic forms as subjects, (333)–(334) have second-person forms as subjects, and (335)–(337) have third-person forms as subjects.

(327) *niL-hmiLkQʔHM -o -r*

- (336) *kuí:n^L -ne -in?*
 know[^]s3 3 3
 They know them.
- (337) *kuë?LM -re -in?*
 give[^]p3 3 3
 He is giving it to him.

5.2. Reflexive. Reflexive expressions are formed by use of a noun rather than pronoun. The noun is suppletive, having three inflected roots which distinguish singular and plural number and three categories of person—first, second, and third—without reference to the inclusive-exclusive or human-animal distinctions found in personal pronouns. As inflected stems, the reflexive noun acts like any other inalienable noun, occurring with postposed possessor in the form of a personal pronoun or noun phrase. By the use of a personal pronoun as possessor, the inclusive-exclusive and human-animal distinctions are, in fact, made when the reflexive noun occurs.

- (338) REFLEXIVE 1 2 3
 singular *?ŋiá?L* *?uěLM* *?ŋia?LM*
 plural *ié:LH* *iá:nLH* *iá:nLH*

The reflexive noun has three primary functions—to emphasize the identity of a referent in its role as participant in a particular nominal relation to a predicate, to indicate solitary action of a participant, or to indicate truly reflexive action of an agent upon him/herself.

In this last role, there is a set of transitive verb stems which may occur as intransitive middles by use of the reflexive noun as their subject constituent. In this context, the subject is expressed by the reflexive noun as acting upon itself and no separate object constituent may be expressed.

- (339) *bé:n^H ?ŋiá?La*
 hit[^]P1s REFL[^]1s
 I am hitting myself.

- (340) *niL-liu:n^M ié:LHna?*
 IMPF-free^{11p} REFL^{1p}
 We free ourselves.

There is a small set of verbal expressions which are always semantic middles and only occur with the reflexive noun as subject rather than a personal pronoun.

- (341) *hmiL-rá:n^H ?ñiá?La*
 CAUSE-sweet^{1s} REFL^{1s}
 I am arrogant.

- (342) *niL-ki?M-hjn?L iá:nLHr*
 IMPF-turn¹³-turn¹³ REFL^{3p}
 They change their attitude.

The following sentence illustrates the use of the reflexive to indicate solitary action.

- (343) s P L
?ñã?LM-b iu:L kéMe sin?LM gi^H-r dóM
 REFL^{3-AFF} baby of^{1s} stand^{s3} AUG³ there
 Only my baby was still standing there.

The reflexive noun may also function appositionally with a personal pronoun or noun phrase to emphasize the identity of the participant named by the personal pronoun or noun phrase.

- (344) P S S
niL-kuŋ:LH -i ?ñiá?La
 IMPF-run^{11s} 1s REFL^{1s}
 I myself will run.

- (345) P S O S
kaL-bé:n^M -? -r ?uëLM?
 PST-hit^{C2} 2s 3 REFL^{2s}
 You hit him yourself.

The reflexive noun without following expression of possessor may occur as manner constituent of a clause to indicate the solitary participation of a referent in a process or action.

- (346) MA P S
ʔŋiaʔLM niL-ʔlé:M ʔeL iʔLH siL-kuiʔHL
 REFL³ IMPF-heal¹³ REL where STA-cut³
 That cut will heal by itself.

5.3. Reciprocal. Reciprocal action is expressed in Comaltepec by the inalienable noun *rúnʔLr* ‘his/her kinsman’ as object of a transitive clause.

- (347) s P O
laLhi:nL zãL kaLhmĩLŋiʔLM rúnʔLr

 HORT-help^{1p} RECIP^{1p}
 Let's help each other!

6

The Comaltepec Chinantec Relative Clause

As indicated in §4, the descriptive modifier of a noun phrase always follows the noun head (unless the noun head is absent) and may be considered in all cases to be a relative clause. This chapter discusses the internal structure of the relative clause.

6.1. The gap strategy. The relative clause contains a regular finite verb, with no special marker on the verb itself to indicate that it is in a relative clause. The relative clause does have two features, however, which distinguish it from other clauses. First, it may be introduced by a relative word, but this is not always the case. More will be said of the relative word below. The more important characteristic of the relative clause is that the so-called GAP STRATEGY (Comrie 1981:144) is employed in its formation, which is to say that the grammatical position within the clause which corresponds to the relation the head of the noun phrase bears to that clause is EMPTY—there is a GAP at that position. This is illustrated in (350) and (351), where a simple τ_1 clause is paired with a noun phrase whose noun head bears the relation of subject to a modifying relative clause, the latter being left with a gap (marked \emptyset) at the subject position.

- (350) P s|Q H | O
 huéʔL *haLlénʔL* *zäL* *huLŋiʔM*
 speak[^]P3 PL person Spanish
 The people speak Spanish.

- (351) O H M|P S O |
kaL-lénʔL zǎL huéʔL Ø huLŋiʔM
 PL person speak[^]P3 Spanish
 (some) Spanish-speaking people

I will here speak of a relative clause such as this as being “relativized on its subject.” The variety of positions upon which a clause may be relativized is discussed in §6.3 but first a few words need to be said concerning the relative word *ʔeL*.

6.2. Use of the relative word. In addition to the gap strategy, a second characteristic of the relative clause is for the inanimate relative word *ʔeL*, or its animate counterpart *ʔiL*, to commonly be present at the beginning of such a clause. The relative word agrees in gender with the noun modified by the relative clause. This is illustrated in (352)–(355), where the relative word is designated, somewhat arbitrarily, as a complementizer.

- (352) P O|Q H D |
kaL-hméMe ʔeL mapa dóM
 PST-make[^]C1s REL map that
 I made that map.

- (353) O H M|COMP P O | D
ʔeL mapa ʔeL kaL-hméMe Ø dóM
 REL map REL PST-make[^]C1s that
 that map which I made

- (354) P O L
kaL-hŋnʔLMn zǎL giáH huiLM Ⓢ

 I met people on the trail.

- (355) H M|COMP P O L |
zǎL ʔiL kaL-hŋnʔLMn Ø giáH huiLM
 person REL PST-meet[^]C1s midst road
 the people I met on the trail

Shorter and less complex relative clauses tend to occur without the relative word introducing them. In some cases, such as those of (356) and (357), the relative clauses would not be well formed were the relative word

present. In these cases, the verb is inanimate intransitive, but I am not yet able to make a general statement concerning when the relative word may or must be absent.

- (356) P L[H M[P S | |

kaL-ŋoL-tin?LHna? *huiLM* (*?eL) *hue?L* Ø

 We went as far as the main road.

- (357) P O[H M[P S | |

kɔ?LH *hú:H* (*?eL) *rē:L* Ø
 with word true
 with integrity

I CAN say, however, that in the same sense that the relative word may function as quantifier of a noun phrase to mark definiteness (§4.2)—its absence conversely implying lack of definiteness—it may also be absent as complementizer when DEFINITENESS is lacking in the use of the modifying clause.

- (358) P O[H M[P O L]

kɔ?LH *zäL* *kaL-hjŋ?LMn* Ø *giáH* *huiLM*
 with person PST-meet ^ Cis midst road
 with people I met on the trail

6.3. Accessibility to relativization. Any of the three primary nominal constituents of a clause may undergo relativization, as illustrated in (359) through (365).

- (359) P S L

se:nL *haL-lén?L* *zäLmĩL* *huiLM* *moL?iaLM*
 exist ^ S3 PL woman road Comaltepec

hé:nLr ha:nL ?iL línLM Ø kq?LH taL dóM
 carry[^]P3 one REL be[^]P3 with cane
 They carry one of those made of cane

6.4. Relativizing nonthird persons. It is possible to relativize on a nonthird-person personal pronoun, but in this context the noun *zäl* 'person' functions as complementizer in place of the animate relative word *?iL*.

- (382) P L
néLMna? laL
 sit[^]P1p here
 We live here.

- (383) Q H M[COMP P L |
haLlén?L hnä?H zäl néLMna? laL
 PL 1x people sit[^]P1p here
 we who live here

Any pronoun may be relativized, irrespective of the grammatical position it occupies, but as (383) shows, there is no gap in the relative clause in the case of a relativized nonthird-person subject. In such cases, the modified pronoun is copied to the relative clause, usually in enclitic form. This parallels the copying of pronouns when topicalization causes their left-dislocation to a position preceding the verb, as mentioned above in §5.1. Example (385) illustrates the first-person singular pronoun being relativized in subject position. Example (387) illustrates the second-person plural pronoun being relativized in subject position with two copies following it.

- (384) P O

7

Comaltepec Chinantec Injunction

Until now I have focussed upon clauses in the indicative mood. This chapter considers injunctive clauses, which include direct and negative imperatives, hortatives, and optatives. Imperative forms address second persons. Hortative clauses enjoin first and second persons inclusively. Optative clauses have subjects of any person-number category.

7.1. **The direct imperative.** A direct imperative clause enjoins one or more second persons to perform an action. The inflectional form of the imperative verb is usually based on the second-person completive form of the indicative stem. The enclitic form of the second-person singular pronoun may not occur with the imperative verb, but plural subject may be marked by the shorter form *náʔL* of the second-person plural pronoun (but not the longer full form of this pronoun).

(388) *kaL-ko:M -ʔ*
 PST-play^c2 2s
 You played.

(389) *ko:M*
 play^!

(390) *ko:M náʔL*
 play^! 2p

(391) *kaL-kuéH náʔL*
 PST-give^c2 2p
 You (pl) gave (it).

(392) *kua^{LH}*
 give^! (it)
 Give (it)!

(393) *kuē^{LH} ná^{?L}*
 give^! 2p (it)
 You (pl) give (it)!

If the subject is prominent, either singular or plural second-person pronouns may occur preceding the predicate. In the case of the plural imperative, both full forms of the plural pronoun may occur, *?niú^{?L}* preceding and *ná^{?L}* following the predicate.

(394) s P
?niú^L kué^H
 2s give^!
 You (sg) give (it).

(395) s P S
?niú^{?L} kué^H ná^{?L}
 2p give^! 1p
 You (pl) give (it).

None of the inflectional prefixes which mark aspect occur with direct imperative verb forms. A second-person directional prefix *ɲi^{L-}* 'come' or *gui^{L-}* 'go', however, may be prefixed to the verb stem when enjoining the addressee to move to or from the place of the speech act in conjunction with the action named by the verb stem.

(396) *ɲi^{L-}?en^{?LH} -r*
 come-teach^! 3
 Come and teach him!

(397) *gui^{L-}hme:^M ta^{LH}*
 go^!2-do^! work
 Go work!

7.2. The negative imperative. A negative imperative verb enjoins one or more addressees not to perform or cease to perform some action. The negative imperative is based on the second-person progressive form of the indicative stem, with the prefix *ha^{L-}* (negative) or the prefix *ho^{L-}*

(terminative). The second-person pronominal inflection which normally follows the indicative form of the verb is not dropped as in the case of direct imperative forms.

- (398) *hiú:M -ʔ lúLM*
 blow^ʔP2 2s instrument
 You are playing an instrument.
- (399) *haL-hiú:M -ʔ lúLM*
 NEG-blow^ʔP2 2s instrument
 Do not blow the instrument!
- (400) *hoL-hiú:M -ʔ lúLM*
 TRM-blow^ʔP2 2s instrument
 Stop blowing the instrument!
- (401) *hoL-hiú:M náʔL ʔeL lúLM naL*
 NEG-blow^ʔP2 2p REL instrument that
 (You^{pl}) Stop blowing those instruments!

7.3. Hortative. The hortative verb is used to call the interlocutors to action. The hortative verb is formed by prefixing the hortative prefix *ʔmaLH-* ‘let us’ to the first-person-plural intensitive form of the verb stem.

- (402) *ʔmaLH-lé:nHM -naʔ ha:nL tuL*
 HORT-buy^ʔI1p 1p one chicken
 Let’s buy a chicken.

To emphasize the solidarity of a group, the free form of the first plural inclusive pronoun may be used.

- (403) *ʔmaLH-séʔH hná:LHaʔ guo:L -r*
 HORT-grab^ʔI1p 1i hand 3
 Let’s all of us shake his hand.

When enjoining a group to perform an action reciprocally (with each other), the reciprocal noun *rúnʔLr* ‘his/her kinsman’ (§5.2) is added to the hortative verb.

(404) *ʔma^{LH}-hmi^Lkɔ^{PHM} rún^{ʔL}naʔ*
 HORT-help^{1p} kinsman^{1p}
 Let's help each other!

(405) *ʔma^{LH}-zi^L-hmi^Lkɔ^{:PHM} rún^{ʔL} hnä^{ʔH}*
 HORT-go^{1p}-help kinsman 1x
 Let's you and I go help each other.

When the hortative injunction implies directional movement to perform the action of the verb, the plural form of the directional prefix follows the hortative prefix.

(406) *ʔma^{LH}-zi^L-ʔé^{:LH} -naʔ -r*
 HORT-go^{1p}-greet 1p 3
 Let's go visit him!

7.4. Optative. An optative verb expresses a wish that the subject perform or persist in the performance of an action named by the verb. It is formed by the optative word *hui^{LH}* and the progressive form of the verb stem, inflected for any category of person-of-subject.

(407) *hui^{LH} hmi^L-guän^{ʔH} -b -re ʔniú^{ʔL}*
 may CAUS-bless³ AFF 3 2p
 May he cause you all to be blessed!

(408) *hui^{LH} kuë^{LM} -b -re hui^{LM} ni^{:LH} -i*
 may give³ AFF 3 road go^{1s} 1s
 May he give me permission to go!

8

Comaltepec Chinantec Questions

The formation of Chinantec questions patterns as one would expect for a vso language. Confirmation questions have a special higher pitched intonational pattern at the beginning of the clause. Interrogative words in information questions are clause-initial, without a special intonation.

8.1 Confirmation questions

A confirmation or yes-no question is formed by adding the question word *sú^H* to a declarative clause. The constituent being questioned is topicalized by left dislocation. The question word may be suppressed, but not without leaving behind a perturbed intonation (here marked by */?/*) on the constituent which follows.

(409) *?sú^H guó^H? ni^Lkuʃ^PH za^L?ó^L*
 ? go[^]12s Oaxaca tomorrow
 Are you going to Oaxaca tomorrow?

(410) *?sú^H sä^L ηú^{LM} ?ni^ːH?*
 ? exist[^]s3 meat sell[^]12s
 Do you have some meat to sell?

(411) *?guó^H? ni^Lkuʃ^PH za^L?ó^L*
 go[^]12s Oaxaca tomorrow
 Are you going to Oaxaca tomorrow?

(412) *?sä^H ηú^{LM} ?ni^ːH?*
 exist[^]s3 meat sell[^]12s
 Do you have some meat to sell?

The negative prefix *ha^{L-}* or the irrealis conditional conjunction *huá^{?H}* may also be used to form a confirmation question, with the special high, interrogative intonation. Such questions imply a positive or a negative response, respectively.

- (413) *?ha^H-guó^{H?} ni^L-kuj^{?H} za^{L?}ʔó^L*
 NEG?-go^{12s} Oaxaca tomorrow
 Aren't you going to Oaxaca tomorrow?
- (414) *?ha^H-ʔin^{LH?} hi^L ké^{Me}*
 NEG?-want^{12s} book of^{1s}
 Don't you want my book?
- (415) *?huá^{?H} ka^L-bä^{LMB} li^{LH} ʔni^{:H?} ké^{Me}*
 IRR? one-bunch^{AFF} palm sell^{12s} of^{1s}
 Don't you have a few tepejilote palm shoots to sell me?
- (416) *?huá^{?H} kɔ:^{Lb} ʔi^Lŋi^{?H} kué^{H?} hnä^{LH}*
 IRR? one^{AFF} bread give^{12s} 1s
 Aren't you going to give me a piece of bread?

Confirmation questions embedded in a clause are formed the same way as independent confirmation questions.

- (417) *ne:^M-du^L-u[?] sú^H ha^Llí:^{nLr} hmí:^{LH} san^L-tiá^{LH}*
 see-VOL^{1p} ? come^{13p} day St^{James}
 Let's see if they will come home for the fiesta of St. James.

8.2–8.7 Information questions

In forming questions for information, the questioned constituent is replaced by an interrogative word and topicalized by left dislocation. Special interrogative intonation is not present in information questions. Interrogative words include a pronoun, a numeral, and adverbs of space, time, manner, and purpose.

8.2. The interrogative pronoun. The interrogative pronoun has two forms, inanimate *?e^{LH}* and animate *?i^{LH}*. It may occupy any of the nominal positions of a clause. In the illustrations which follow, 'X' indicates the normal position from which the interrogative constituent is dislocated.

- (418) S P X L T
ʔi^{LH} tá:n^{LH} hui^{LM} hui:^L la^L-ná^M
 who? live^{^P3p} road town now
 Who is in town now?

- (419) O P X
ʔe^{LH} ʔin^{LH}ʔ
 what? want^{^P2s}
 What do you want?

In the case of an embedded nominal, such as the modifier of a noun or the object of the associative verb, there may be double dislocation—both within the matrix clause and in the embedded construction itself. In these particular cases, the modifier and object, respectively, are dislocated to the left of the embedded construction, which is then also dislocated in its entirety to the beginning of the matrix clause (two ‘X’s are required in the labelling of such cases).

- (420) O|M H X| P X
ʔe^{LH} ma^L-hí^L ʔin^{LH}ʔ
 what? paper want^{^P2s}
 Which paper do you want?

- (421) ASSOC|O P X| P X T
ʔi^{LH} kəʔ^{LH} guó^Hʔ za^Lʔó^L
 who? with go^{^I2s} tomorrow
 With whom are you going tomorrow?

The interrogative pronoun can function as an intransitive predicate to question the identity of an (animate or inanimate) nominal.

- (422) P S
ʔi^{LH} ʔi^L zä^L dó^M
 who? REL person that
 Who is that person?

- (423) P S
ʔe^{LH} ʔe^L na^L
 what? REL that
 What is that?

There is an indefinite pronoun, with inanimate and animate forms which would appear to be closely associated with the interrogative pronoun—*ʔi:L* ‘who?, whoever’, and *ʔe:L* ‘what?, whatever’. These forms occur especially in clauses functioning as complement of a cognition verb, but may also occupy the head of any indefinite noun phrase.

(424) *haL-ŋiMi ʔi:L ʔiL zäL laL*
 NEG-know[^]S1s who REL person this
 I do not know who this person is.

(425) *haL-ŋiMi ʔe:L hmó:L-o*
 NEG-know[^]S1s what do[^]P1s
 I do not know what to do.

(426) H M[P S O]
ʔi:L ʔniúʔL ʔo:M náʔL tʃiM ʔmiʔLkiʔLH náʔL
 whoever 2p have[^]P2p 2p two shirts[^]2p 2p
 whoever of you has two shirts

(427) O P S O
haL-ʔi:L niL-síʔL -r hʃiʔLH ha:nL
 NEG[^]whoever IMPF[^]tell[^]T3 3 only one
 Not even one person are they to tell.

(428) O P S
haL-ʔe:L ʔuëʔLH náʔL
 NEG[^]whatever remove[^]PL[^]I2 2p
 Do not remove anything!

8.3. The interrogative numeral. The interrogative numeral—*hoʔLH* ‘how much/many?’ for inanimate nouns and *hēnʔLH* for animate nouns—occupies the quantifier position of a noun phrase or—as in the case of any numeral—may occur alone in nominal reference in the absence of any other element of the noun phrase. Since the quantifier is normally the left-most constituent of a noun phrase, no left-dislocation occurs within the phrase itself when the interrogative numeral is present; but the noun phrase as a whole must move to the dislocated position within the clause. The interrogative numeral has the same form in an embedded question as in an independent question.

- (429) s|Q H | P X L T
hën?LH tu^Lhua?LM tá:nLH hui^{LM} hui^L la^Lnám
 how^many? teacher live^P3p road town now
 How many teachers are in town now?

- (430) o|Q H | P X
ho?LH mo^LtuHL láH?
 how^many? egg buy^I2s
 How many eggs will you buy?

8.4–8.7 Interrogative adverbs

There are four interrogative adverbs—of spatial location, of temporal location, of manner, and of purpose. The constituent questioned undergoes left dislocation, in the same manner as with the interrogative pronoun or numeral.

8.4. The interrogative adverb of spatial location. This adverb is *hie^{LH}* ‘where?’; the form for embedded questions is *hié?L*.

- (431) L|M H X| P S X
hie^{LH} hui^{LM} ró:L bē?LH ké^{Me}
 where? road lie^P3s ball of^1s
 Where is my ball?

- (432) P L
ha^L-ŋiMi hié?L hui^{LM} ró:L bē?LH kí:M?
 NEG-know^P1s where road lie^P3s ball of^2s
 I don't know where your ball is.

8.5. The interrogative adverb of temporal location. This adverb is *li^{LH}* ‘when?’; the form used for embedded questions is *li?L*.

- (433) T P L X
li^{LH} guën?H hui^{LM} kí:M?
 when? go^home^I2 road of^2s
 When are you going home?

- (434) P O
haL-ŋiMi liʔL guənʔH huiLM ki:MP
 NEG-know^{P1s} when go^{home}I2s road of^{2s}
 I do not know when you are going home.

8.6. The interrogative adverb of manner. This adverb is *hial^{LH}* ‘how?’; in an embedded question its form is *hial^L*.

- (435) MA P S O X
hial^{LH} hmoʔLM zäL ʔeL laL
 how? assemble^{P3} person REL this
 How do people make this?

- (436) P MA[MA P S O X]
haL-ŋiH hialL gëʔLM zäL ʔeL ʔoLhui:L laL
 NEG-know how eat^{P3} person REL fruit this
 It is not known how people eat this fruit.

8.7. The interrogative adverb of purpose. This adverb has the complex form *hial^{LH}liʔLM* ‘why?’; its embedded form is *hial^LliʔLM*.

- (437) PURPOSE GROUND
hial^{LH}liʔLM haL-kéʔL ʔeL ʔoLhui:L laL
 why? NEG-eat^{P2s} REL fruit this
 Why do you not eat this fruit?

- (438) P O
haL-ŋiH hial^LliʔLM gëʔLM zäL ʔeL ʔoLhui:L laL
 NEG-know why eat^{P3} people REL fruit this
 It is not known why people eat this fruit.

9

Comaltepec Chinantec Prepositions

The Chinantec forms treated in this chapter correspond both to the prepositions and to certain subordinating conjunctions of many traditional statements. The difference between these two categories in such traditional presentations is probably best summed up in terms of conjunctions subordinating clauses while prepositions subordinate words and phrases. This distinction is not clear in all Chinantec subordinators—some may subordinate clauses as well as words or phrases. It is also true that each subordinator is ultimately unique in respect to the objects it subordinates and the grammatical roles it may play. For these reasons and because this study is only one of many which are planned to appear in this series treating several related Chinantec languages, these subordinators are discussed here in a single chapter, somewhat arbitrarily labelled Comaltepec Chinantec Prepositions.

9.1. Prepositions. Comaltepec Chinantec is a prepositional language, conforming to the normal pattern of a *vso* language. A number of preposed grammatical markers have been described elsewhere in this study—§3 mentions conjunctions which introduce interrelated clauses and the associative verb which marks accompaniment or instrument within the clause, §4 mentions the allocational noun and prepositional nouns, which act like prepositions although they are easily considered inalienable nouns with possessor constituent following them. These latter are dealt with in the second part of this chapter, but this first section summarizes a narrower group of words, most of which have been mentioned above, but all of which subordinate spatial- or temporal-locative material within the clause, namely, the forms listed in (439).

- (439) *mī^{LH}*- 'when'
ʔie^{LH} 'while'
kar^L 'until'
li^{LH} 'where'
ti^{LM} 'to'

The first three of these preposed subordinators are temporal in reference. The first, *mī^{LH}*- 'when', is proclitic in form and seems to always subordinate a clause, marking a point in time when the action named by the subordinated clause has taken place.

- (440) P O O T[PREP P]
hmó:Lo ʔi^H ʔniú^{LM} mī^{LH}- ka^L-niu:^L
 make^{^P1s} care house when PST-dark^{^C3}
 I guard houses after it gets dark.

- (441) P L[PREP P S]
ka^L-hná^M mī^{LH}- ka^L-gé^M ha:n^L zál^{mí^L}
 PST-dawn^{^C3} when PST-arrive^{^C3} one woman
 It dawned when a woman arrived.

The second subordinator, *ʔie^{LH}* 'while', indicates a period of time during which an action or state existed or was in process (as opposed to a point in time). This preposition seems to subordinate a wider range of grammatical forms than *mī^{LH}*- 'when'.

- (442) T P S L
ʔie^{LH} ʔó^{Mo} ni^Lkuí^{ʔH} ʔó^{LM} -o hé^{LH} ʔniú^{LM}
 while go^{^C1s} Oaxaca go^{^P1s} 1s among house
 While I went to Oaxaca, I was going among the houses.

- (443) S P T
ha^L-lo^Lmí^{Li} mī^{LM}-sá^L ʔie^{LH} hmí:^{LH} hq^L
 NEG-saddle^{^1s} PERF^{^exist}^{s3} while day that
 I did not yet have saddles in those days.

The third subordinator, *kar^L* 'until', indicates the end point of a period of time occupied by a process or state as being that indicated by the occurrence of the action stated by the clause it subordinates.

- (444) P O T|PREP P S |
bá^La mo^Lgi^{LH} -re? kar^L ni^L-hú:n^M -ne?
 hit[^]P1s head[^]3 animal until IMPF-die[^]I3 animal
 I am hitting its head until it dies.

- (445) L P S T
hə^Lb ni^Lhə^H ná^L? kar^L ta^{LH} tá:n^{LH} ná^L?
 that[^]AFF IMPF[^]stay[^]2 2p until work have[^]P2 2p
 There is where you will stay until you finish your work.

Two subordinators occasionally combine in the same construction. The following sentence illustrates *kar^L* ‘until’ subordinating *mi^{LH}-* ‘when’.

- (446) P S O T
ha^L-ni^L-hu^{LH} -? ?niú^{LM}ŋi^H kar^L mi^{LH}- ka^L-kí^H -? ha^Llé^L? ku:^M
 NEG-IMPF-exit[^]I2 2s jail until when PST-pay[^]C2 2s PL money
 You will not get out of jail until you have paid all the money.

The remaining two prepositional subordinators reference spatial location. The first of these, *li^{LH}* ‘where’, locates an action or state at a place named by the clause it subordinates.

- (447) P MODAL S
huí^{LM} mó^L? kuo^L -b li^{LH}- ka^L-hún^{Mr}
 road mountain bald AFF where PST-die[^]C3
 It was Bald Mountain where he died.

- (448) MA P S
?ŋia^{LM} ni^L-?lé:^M ?e^L li^{LH} si^L-kuí^{?HL}
 REFL[^]3 IMPF-heal[^]I3 REL where STA-cut[^]S3
 That cut will heal by itself.

In the following sentences, the clause subordinated by *li^{LH}* ‘where’ functions as the modifier of the locative noun *huí^{LM}* ‘road’.

- (449) P L|H PO|PREP P O |
ka^L-ŋó^Mna? huí^{LM} li^{LH} ni^L-hé^{?Lr} ?e^L ?niú^{LM} dó^M
 PST-go[^]C1p road where IMPF-remove[^]I3 REL house that
 We went to where they would remove that house.

9.2. Prepositional nouns. In addition to the subordinators treated above as prepositions, Chinantec also has a small subset of inalienable nouns, introduced briefly in §4.6, which function like locative prepositions. The example given in §4.6 is repeated here—the inalienable noun meaning ‘face’, as in *ni^{LH} zã^L* ‘person’s face’, is commonly used locatively with an inanimate possessor to mean ‘on the surface of’, as in *ni^{LH} mes^{LH}* ‘on the table’.

- (455) P L[H PO]
gia^{Ma} ni^{LH} mes^{LH}
 put[^]P1S face[^]3 table
 I put them on top of the table.

This use of inalienably possessed nouns is an important feature of Chinantec for locating referents in the way many languages do by the use of true prepositions. There are two sets of these nouns—those which name body parts and can generally occur with enclitic forms of pronouns as well as with full noun phrases as possessor, and those which only occur with noun phrases as possessor. Nouns of the first sort, naming body parts, are presented first in (456) and illustrated in the paragraphs which follow.

- | | | | |
|--|----------------|---|----------------------|
| (456) <i>ni^{LH}</i> | ‘face of’ | → | ‘on top of’ |
| <i>iï:^M</i> | ‘lower leg of’ | → | ‘at the foot of’ |
| <i>zi^{LM}</i> | ‘heart of’ | → | ‘inside of’ |
| <i>?o:^M</i> | ‘mouth of’ | → | ‘at the mouth of’ |
| <i>ki^Lni^{HM}</i> | ‘space before’ | → | ‘in front of’ |
| <i>ka^Lliú:^{HM}</i> | ‘space behind’ | → | ‘behind, outside of’ |
| <i>mo^Lgi^{LH}</i> | ‘head of’ | → | ‘at the head of’ |
| <i>mo^Lko^{?LH}</i> | ‘back of’ | → | ‘on the back of’ |

The noun *ni^{LH}* ‘face of’ has been illustrated above, but an additional example is as follows.

- (457) P S L[H PO]
ka^L-hme^{?LM} -r ni^{LH} hi^L
 PST-write[^]c3 3 face[^]3 paper
 S/he wrote a book.

The noun *iï:^M* indicates the lower leg from the knee to and including the foot of a human or animal.

- (458) P S L[H PO]
kaL-ʔi^M hmiː^L tiː^M ʔe^L ʔniú^{LM} dó^M
 PST[^]enter[^]c3 water foot[^]3 REL house that
 Water entered the foundation of that house.

- (459) L[H M[H PO] P S O
hui^{LM} tiː^M móʔ^{Lb} kaL-siːn^L -r gán^M ʔi^L zã^L dó^M
 road foot mountain[^]AFF PST[^]send[^]c3 3 two REL person that
 It was from the foot of the mountain that he sent those two men.

The noun *zi^{LM}* ‘heart of’ names the upper body cavity or, figuratively, the seat of emotions. In its preposition-like use, it references interior space. In (460) this inalienable noun phrase is modifier of the locative noun *hui^{LM}* ‘road’.

- (460) P S L
kaL-lin^{ʔM} -r hui^{LM} zi^{LM} guá^{ʔM} dó^M
 PST[^]experience[^]c3 3 road heart[^]3 church that
 S/he experienced it inside that church.

- (461) P S L
niLziL-tän^{ʔLH} -r zi^{LM} haL-lén^{ʔL} ʔi^L kú^H dó^M
 IMPF[^]GO[^]BE[^]IN[^]I3p 3 heart[^]3 PL REL pig that
 They (spirits) will go into those pigs.

The noun *ʔoː^M* ‘mouth of’ can reference most any orifice.

- (462) P S O
niLhni^M -r ʔe^L ʔoLʔniú^H dó^M
 IMPF[^]close[^]I3 3 REL mouth[^]house that
 She will close that door.

- (463) P S L
kaL-ʔoL-tan^{ʔLH-b} -re zi^{LM} ʔoLtoːHL ʔéː^L dó^M
 PST[^]GO[^]c3-insert[^]3-AFF 3 heart[^]3 mouth[^]hole tomb that
 S/he was placed inside of that cave-like tomb.

The form *kiL-ni^{HM}* is based on the word ‘face’ and means ‘face-to-face, in front of’.

- (464) P O L[H PO]
niL-hmé:LHe hú:H kiLniHM zäLtaLH
 IMPF-make^{1s} word before council
 I will speak before the town council.

- (465) P S O L
kaL-giaLM -r guiL kiLniH náPL
 PST^{spread}c3 3 advice before² 2p
 He spoke his counsel before you all.

- (466) P S O L
niLhméM -r taLH kiLniMH fi:LHr
 IMPF^{do}i3 3 work before boss³
 S/he will do work for his/her boss.

In its prepositional use, the noun *kaLlú:HM* conveys a meaning of 'behind' or 'outside of' an object.

- (467) L P L[H PO]
dóMb sin?LMr kaLlú:HM -?
 there^{AFF} stand^{s3s} behind 2s
 There he stands, behind you.

- (468) L[H PO] P S
kaLlú:HM ?eL hiL dóM né:M haLlé?L hmiLró:M
 behind REL book that lie^{s3} PL sodapop
 The sodapop is behind that book.

- (469) P S O L
kaL-mánM baM -a ha:nL mi?L kaLlú:Lu
 PST-see^{c1s} AFF 1s one snake behind^{1s}
 I saw a snake behind me.

The noun *moLgiLH* 'head of' has, in its prepositional use, the meaning 'at the head of'.

- (470) T P S L
kq:L ne?LH kaL-guénM zäL moLgiLH huilM mo?L?iaLM
 one time PST-arrive^{c3} person head³ Comaltepec
 Once the governor came to Comaltepec.

The noun *hé:LH* ‘in the midst of’ speaks to an object being located among a group of other objects. It has both spatial and temporal uses. It sometimes occurs as *laLhé:HM*.

- (476) P L[H PO]
ŋóM_oʔ *hé:LH* *kuí:LH*
 go^c1_p among firewood
 We went to get firewood.

- (477) T[H PO] P S
hé:LH *hmĩLʔí:LH* *haLlí:nL* *haLlénʔL* *zäL* *hui:L*
 among day[^]dead come[^]P_{3p} PL person town
 During All Souls’ Day, the townspeople return home.

- (478) P T[H PO PO]
haL-ní:LHi *laLhé:HM* *zaLʔóL* *ʔiéLM*
 NEG-go[^]1_s among tomorrow day[^]after[^]tomorrow
 I will not be going tomorrow or the next day.

The form *zeʔL* ‘side of’ references a verticle surface.

- (479) P O L[H PO[H PO]]
niL-téʔL-naʔ *ʔiLM* *huiLM* *zeʔL* *ʔieʔL*
 IMPF-paint[^]1_p color road side wall
 We will paint the wall.

The form *kaʔLM* ‘side of’ has spatial reference to the area adjacent to some object.

- (480) P L[H PO]
gi:nLHn *kaʔLM* *ʔeL* *géLM* *dóM*
 sit[^]P_{1s} beside REL lake that
 I live by that lake.

The form *niúʔM* ‘underneath, before’ speaks of the under side of an object or of ‘prior’ time.

(481) P O L[H PO]
niL-ʔmä^Ma hoLŋi^L niú^{ʔM} ʔe^L ʔma^L na^L
 IMPF-guard¹_{1s} key under REL wood that
 I will hide the key under that wood there.

(482) P O L[H PO]
kaL-ʔmä^{LM}r hi^L kiá^{ʔM}r niú^{ʔM} mi^L-kuí^{:H}
 PST-guard³ book of³ under corn
 He hid his book in a pile of kernelled corn.

(483) P S T[H PO]
ʔi^{:L} gi^L guí^{ʔH} niú^{ʔM} hmi^Lʔli^{:LH}
 hang³ air cold before day³ dead
 The cold winds blow before All Souls' Day.

10

Modal Adverbs

There are nine adverbs which modify the action of the verb in a quantitative or qualitative way. When postposed to a verb, they intervene between the verb and any pronoun which might otherwise be adjacent to the verb. If the pronoun is enclitic, it combines closely with the modal adverb and the adverb may exhibit tonal inflection for person in the same way found in verbs and inalienable nouns. The modal adverbs are listed in (484) and discussed one at a time.

(484)	<i>gól</i>	(courtesy)	'please'
	<i>duL</i>	(volition)	'intend'
	<i>tú^M</i>	(repetition)	'again'
	<i>tãL</i>	(momentary)	'awhile'
	<i>hiu^{LH}</i>	(diminution)	'a little'
	<i>bí^H</i>	(continuation)	'still'
	<i>gí^H</i>	(augmentation)	'further'
	<i>bá^{?H}</i>	(affirmation)	'yes'
	<i>lí^{LM}</i>	(excessive)	'much'

10.1. The courtesy modal adverb *gól*. This adverb is enclitic in form and is used when asking a superior for a favor. It does not occur with a range of enclitic pronouns associated with it and, therefore, only has one, nonvariant phonological form.

(485)	P	MODAL	O		VOC
	<i>hme:^M</i>	<i>gól</i>	<i>huén^{?LM}</i>	<i>?o^{LM?}</i>	<i>ka^{Lbó^{LH}}</i>
	make [^] !	COUR	big	heart [^] _{2s}	cofather
	Please be patient, cofather.				

- (486) P MODAL O
nä^{LH} gó^{L?} ?e^L ?o^{L?}níú^H la^L
 open[^]12 COUR[^]2s REL door this
 Please open this door!

10.2. The volition modal adverb *du^L*. This adverb only occurs immediately following a verb, but not a completive-aspect verb. It indicates intention, urging, purpose, or desire on the part of the subject of the verb.

- (487) P MODAL S
guí:n^M du^M -u
 sleep[^]P1s VOL[^]1s 1s
 I intend to sleep.
- (488) P MODAL S MA
?mán?^{LM} du^M u ?lá:n^M
 thank[^]1s VOL[^]1s much
 I really want to thank you alot.

10.3. The repetition modal adverb *tú^M*. This adverb indicates that an action is a repetition of an earlier like action. It undoubtedly derives from the inanimate numeral *tú^M* ‘two’. It occurs only following verbs.

- (489) P MODAL S T
kuí:^L tú^M -u la^{L?}?e:^L
 run[^]P1 REP 1s morning
 I am running again in the mornings.
- (490) P MODAL S L
zi^Llí:n^M tú^M -r huí^{LM} ní^Lkuí?^H
 go[^]P3p REP 3 road Oaxaca
 They are going again to Oaxaca.

10.4. The momentary modal adverb *tá^L*. This adverb is, more generally, a temporal adverb meaning ‘briefly’ and functions like other temporal adverbs as the temporal constituent of a clause, as in (491); but it may also occur directly following a verb with all the formal characteristics of an enclitic modal adverb, as in (492).

(491) P S T
gui:n^L -r kaLtá^L
 sleep[^]P3 3 briefly
 S/he sleeps for a brief time.

(492) P MODAL S T
kaL-kó^H tä^L -a[?] zi^Lʔló:^M
 PST-play[^]C1p MOM 1p last[^]evening
 We played briefly yesterday afternoon.

The momentary modal adverb may be used to soften a request.

(493) NEG P MODAL S O O
ʔha^H-kué[?]H tä^L -ʔ hnä^{LH} pala kí:^Mʔ
 ʔ[^]NEG-give[^]I2 MOM 2s 1s shovel of[^]2s
 Won't you loan me your shovel briefly?

The remaining modal adverbs are not restricted to following verbs, but may follow all other classes of words. They tend to appear more commonly than the first four and indicate a degree of topicalization or perhaps even mark a constituent as a predicate.

10.5. The diminution modal adverb *hiu^{LH}*. This adverb is derived from an ordinary manner adverb which has both a long form *hiú:^{LH}* and a short form *hiu^{LH}* ‘a little’, with no apparent difference in meaning between the two. In its modal function, it invariably takes the short form and expresses politeness or focuses more literally upon a smallish size or quantity. It may follow other parts of speech as well as verbs.

(494) P S|Q H MODAL D]
kaL-ko:^L ʔe^L ʔma^L hiu^{LH} dó^M
 PST-burn[^]C3 REL tree DIM that
 That bush burned.

(495) P S|Q H M|COMP P MODAL MODAL S]]
ʔiu:n^M ha:n^L ʔieʔLú^{LM} ʔi^L pin[?]H -b hiu^{LH} Ø
 be[^]in[^]P3 one tiger REL small AFF DIM
 A smallish tiger was there.

- (496) P MODAL S O
ʔi:nLH hiuM -u ʔeL hmiLŋiHM dóM
 like^{^P1} DIM^{^1s} 1s REL food that
 I sort of like that food.

Like the momentary model, the diminution adverb may be used to soften a request.

- (497) NEG P MODAL S O O
ʔhaH.kuéʔH hiuLH -ʔ hnäLH ʔiHʔ
 ʔ[^]NEG-give^{^12} DIM^{^2} 2s 1s tortillas^{^2s}
 Won't you give me some of your tortillas?

10.6. The continuation modal adverb *bíH*. This adverb indicates that the action of a verb continues in progress. When used with other parts of speech, it may have this continuing aspect also.

- (498) P MODAL S
hiú:nLH bíH -i
 child CONT 1s
 I was (am) still a child.

- (499) P MODAL S T
síLmí:nH bíH -r míLH-kaL-kúnʔLr guóLr
 young[^]lady CONT 3 when-PST-join[^]C3 hand^{^3}
 She was still a young lady when she got married.

- (500) P MODAL S
hnäLH bíH ʔiL si:L séH
 1s CONT REL name[^]s3 Joseph
 I continue to be the person named Joseph.

- (501) P MODAL S
bíL bíH zíLM niL kéHe
 strong CONT heart^{^3} mother^{^1s} of^{^1s}
 My mother is still strong.

- (502) P MODAL S
ka^L-ŋi^{LM} bɨ^H -r
 PST-walk[^]C3 CONT 3
 She can still walk.

10.7. The augmentation modal adverb *gɨ^H*. This adverb is also used with several parts of speech, one of its uses being to form comparative statements. It is used more often than any other modal except the affirmation modal *bá^{PH}* (§10.8).

- (503) P S[Q MODAL H]
ka^L-gui^Llí:n^M gán^M gɨ^H zä^Lŋiu^{PL}
 PST-arrive[^]C3p two AUG man
 Two more men arrived.

- (504) P MODAL S
ti:^L gɨ^H má^{PH} kiá^{PM} ?ma^Lkí:HL
 thin AUG leaf of[^]3 pine tree
 The leaves of pine trees are thinner.

- (505) P MODAL S MA
ka^L-lí^{PM} gɨ^H -ʔ la^Lkó^{PL} hnä^{LH}
 PST-get[^]C2 AUG 2s than 1s
 You got more than I.

- (506) P MODAL S
ní:^{LH} gɨ^H -i
 go[^]11 AUG 1s
 I will be going further.

10.8. The affirmation modal adverb *bá^{PH}*. This adverb is the most frequently used of all the modal adverbs, able to occur following any part of speech. It is used to express prominence, agreement, or assertion. Its reduced (enclitic) form is *-b*. As is true of the other modals which may follow verbs, enclitic forms of pronouns are postposed to the affirmation modal, modifying its phonological form.

- (507) P MODAL S T
ní:LH ba^M -a za^Lʔó^L
 go¹ AFF^{1s} 1s tomorrow
 Yes, I'm going tomorrow.

- (508) MA MODAL P L
zán^{ʔL} ti:^M -b ʔi^{LM} hé:LH huí:^L
 very silently AFF hang³ among town
 It was very silent in town.

When a constituent is topicalized by left dislocation, either form of the affirmation modal adverb may be added to the last element of the constituent. The modal adverb predicates this constituent.

- (509) T MODAL P O
la^L-ʔi:^M ɲiú^M bá^{ʔH} ka^L-gú^{ʔLu} ka^Lhué^{LH}
 PST¹sound nine AFF PST-drink¹ coffee
 It was at nine o'clock that I drank my coffee.

- (510) L MODAL P
sí^L-niú:^H -b nán^{LMr}
 inside AFF sit^{3p}
 Inside is where they sit.

When a relative clause follows the affirmation modal, the relative word is reduced to the same enclitic form *-inʔ* as for the third-person pronoun when it is the second of two enclitic pronouns (§3.13 & §5.1, fn).

- (511) P MODAL S[COMP P S O]
ʔi^L zäl-mí^L na^L -b -inʔ ka^L-kuë^{LM} Ø hmi^Lgiu^{LM} ɡí^H
 REL woman that AFF REL PST-give³ much AUG
 It was that woman who gave more.

- (512) P MODAL S[COMP P S L]
ka^L-mín^{ʔLH} sí^L-mín^{ʔL} la^L -b -inʔ se:^{nL} Ø ké^{Me}
 one-measure young¹man this AFF REL exist³ of^{1s}
 Only this one young man exists of mine.

Up to three modal suffixes may be added to a single word. In the case of a verb, the verb form is internally inflected for all persons and aspects,

but the enclitic pronoun follows the final modal adverb. The volition and courtesy modal adverbs always occur alone. The diminution modal always occurs last when two or three modals occur together.

- (513) P MODAL MODAL MODAL S T
kaL-ʔúL *bíʔH* *gíʔL* *hiuM* -u *híʔLH* *kʔ:L* *semestre*
 PST-enter[^]CI CONT AUG DIM[^]1s 1s only one semester
 I continued a little longer for only one semester.

- (514) T P MODAL MODAL S
laLʔj:M *ʔniLM* *niL-záʔH* -b *tíM* -naʔ
 PST[^]sound[^]s3 three FUT-go[^]home[^]11p AFF REP 1p
 At three o'clock we will go home again.

10.9. The excessive modal adverb *liLM*. This adverb indicates that an action occurs to an excessive degree.

- (515) P MODAL S O
hoL-guíL-hmiL-huénʔLM *liLM* -r *ʔniuL*
 NEG-DIR-worship[^]13 EXCESS 3 2s
 They must no longer idolize you so much.

- (516) P MODAL S O
hméM *liLM* -r *huiLʔiH*
 make[^]P3 EXCESS 3 sadness
 S/he is so very sad.

10.10. Modal adverbs with enclitic pronouns. Modal adverbs have been illustrated throughout this study with following enclitic pronouns which, in some cases, affect the phonological form of the adverb. There are just two basic tone patterns in this context; they are illustrated in this section in the form of two prototypical paradigms.

The courtesy modal adverb does not occur with all of the enclitic pronouns and the excessive modal adverb has only been observed with third-person pronouns; but the other modals may occur with any of the enclitic forms of the pronouns. Following are examples of the two basic tone patterns which the modal adverbs carry when inflected for the enclitic pronoun. The repetition, momentary, continuation, and augmentation modal adverbs are inflected in the following way for the enclitic pronouns, as indicated by means of the repetition adverb.

(517)	<i>ni:LH</i>	<i>tɔ̃Hu</i>	I go again.
	<i>guóʔH</i>	<i>tɔ̃Hʔ</i>	You (sg) go again.
	<i>zéM</i>	<i>tɔ̃Mr</i>	S/he goes again.
	<i>zéH</i>	<i>tɔ̃Muʔ</i>	We go again.
	<i>guiLlí:nL</i>	<i>tɔ̃Muʔ</i>	You (pl) go again.
	<i>ziLlí:nL</i>	<i>tɔ̃Mr</i>	They go again.
	<i>zéM</i>	<i>tɔ̃Mreʔ</i>	The animal goes again.
	<i>ziLlí:nL</i>	<i>tɔ̃Mreʔ</i>	The animals go again.

The affirmation, diminution, and volition modal adverb is inflected for the enclitic pronouns as follows.

(518)	<i>ni:LH</i>	<i>baMa</i>	Yes, I go.
	<i>guóʔH</i>	<i>báHʔ</i>	Yes, you (sg) go.
	<i>zéM</i>	<i>-bre</i>	Yes, s/he goes.
	<i>zéH</i>	<i>baMaʔ</i>	Yes, we go.
	<i>guiLlí:nL</i>	<i>báMaʔ</i>	Yes, you (pl) go.
	<i>ziLlí:nL</i>	<i>-bre</i>	Yes, they go.
	<i>zéM</i>	<i>-breʔ</i>	Yes, the animal goes.
	<i>ziLlí:nL</i>	<i>-breʔ</i>	Yes, the animals go.

Studies in Chinantec Languages 3

Publications in Linguistics 89

Comaltepec Chinantec, with 1500 speakers, is one of fourteen Chinantec languages and related dialects spoken in the northeast quadrant of the Mexican State of Oaxaca. The Chinantec languages comprise a major branch of the important Otomanguean stock of Mesoamerican tone languages and Comaltepec Chinantec is one of two or three of these languages spoken in the highland, Sierra de Juárez District of Oaxaca which are noted for their very complex phonological systems.

Comaltepec Chinantec Syntax by Judi Lynn Anderson is the third volume of a subseries of SIL AND UTA PUBLICATIONS IN LINGUISTICS dedicated to the description and interpretation of Chinantec languages and the second of five syntactic overviews prepared to date for publication in this series. Miss Anderson's study presents the results of nearly two decades of concentrated research on this interesting vso language. It is cast in a nonformal style designed to facilitate typological comparison with other Chinantec as well as with non-Chinantec languages.
